

CONDENSATION STATION

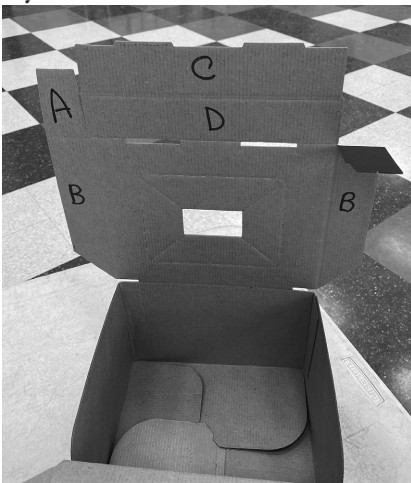

ASSEMBLY AND CARE INSTRUCTIONS

Congratulations on the purchase of your Condensation Station, which will help keep your band room sanitary and safe for all, from your friends at GIA Publications, Inc. Setup is quick and easy with these simple instructions! Visit giamusic.com/condensationstation for a link to videos as well. Patent pending.

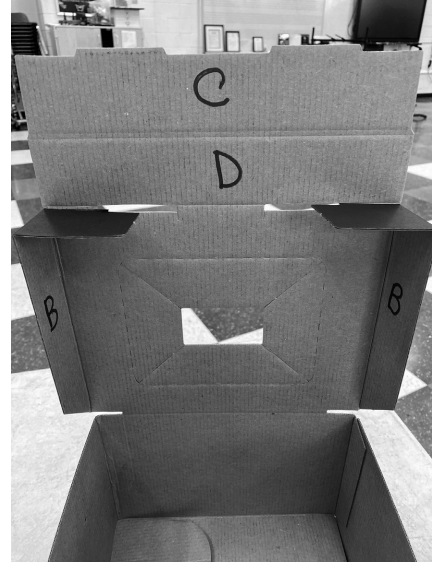

1. Start with the Condensation Station flat on a table as it is shipped.
2. Lift from the center edge closest to you to create a box base.
3. Press down the center of the base for closure.

4. For each side of the box, fold down Flap A 90 degrees toward the floor. Be sure to fold past 90 degrees (180 degrees) creating a crease and return to 90 degrees to assure stability.

5. Fold Section Panel B 90 degrees toward the center of the box. Be sure to fold past 90 degrees (180 degrees), creating a crease, and return to 90 degrees to assure stability.

6. Fold Section Flap D OVER both Section Flaps A 90 degrees toward the floor, followed by section C.

7. Fold Section Panel C **OVER** Section Flap A to cover completely. Remember to fold past 90 degrees (180 degrees) creating a crease and return to 90 degrees. Insert the tabs on Section Panel C into the slots.

8. Repeat Steps 4-7 for Side 2 (the side with the receptacle)

9. Fold Side 2 (with the receptacle) down 90 degrees toward Side 1. Make sure both Side Panel Bs are **OUTSIDE** the box.

10. Fold down the Receptacle Flaps on Side 2 90 degrees to allow for the Condensation Collection Bag.

11. Apply the Condensation Station decal to the inside of Side 1. Be sure to use your finger to press out all air bubbles. This decal is vinyl and can be cleaned with windex or other mild cleaners.

12. Close Side 1 and create a crease for complete closure.

Insert the safety string in two slits on the right side of the box, from the inside, as shown.

ADDING THE CONDENSATION COLLECTION BAG (CCB)

1. To insert the Condensation Collection Bag (CCB), open Side 1.
2. Remove a bag and unfold with the opening at the top.
3. Place the center of the CCB down through the receptacle opening. Allow for the edges of the bag to hang over the sides of each of the Side Panels.

4. Tuck the sides of the CCB around each corner of Side 2. Once done, adjust the center of the CCB to the bottom of the box to allow for maximum capture and fewer spills.

Store spare bags in the bottom of the Condensation Station.

DISPOSAL OF THE CONDENSATION COLLECTION BAG (CCB)

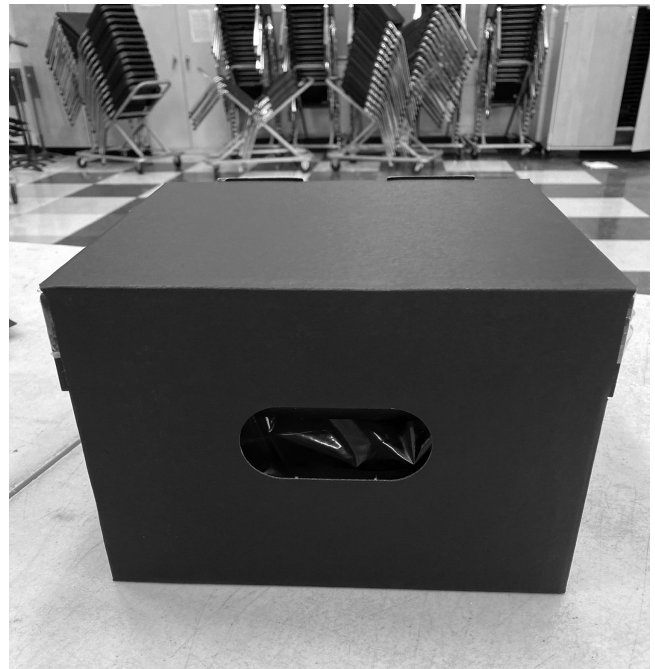

1. The station can sit closed when not in use at the foot of the student or under the chair.

2. When needed, simply open the top.

3. For easy carriage, pop out the handle slot in the back of the box (Side 1).

4. After use, remove the bag and tie closed. Dispose properly.
5. Store with a new or a clean CCB inserted.
