General Information

Garden Nurture™ Soil Inoculant aids in growth and production of all varieties of garden beans, peas, and peanuts.

Garden Nurture™ Soil Inoculant contains millions of live bacteria that are essential in the nitrogen fixating process of garden legume plants. These bacteria, when properly placed in the root zone area of the soil, will actively convert atmospheric nitrogen into a useable form for the plant. Therefore, enabling the plant to produce its own organic source of nitrogen, leading to lush vine growth and ultimately greater yields.

Directions

Prepare seed bed for planting. Make furrow and plant legume seed into furrow without covering seed with soil. Apply granular inoculant in the furrow next to the seed. Apply ample amounts to ensure proper nodulation of emerging roots. Over application is not detrimental and has shown to be beneficial. Cover the seed and inoculant with the soil. To ensure optimal performance of Garden Nurture™ Soil Inoculant, water plants as directed throughout growing season.

Storage and Usage Guidelines

Store in a cool, dry place out of direct sunlight. Do not open until ready to use. Do not use after expiration date. Do not mix with caustic fertilizers or pesticides. Use only on specific legume seed.

100% Satisfaction Guarantee

If you are not happy with this product, we will replace it, give you credit or refund your money for the full amount of your purchase price. All of our products are guaranteed for as long as you garden. We want you to be a satisfied customer.
