

## **Directions for Application:**

### **New Plants-**

#### **In containers:**

- › Use Blueberry Success Mix as a planting mix for your plants in containers.
- › No other amendment is needed.

#### **In raised beds:**

- › When building your raised beds, you should make them 8 inches deep.
- › Width and length will depend on the type and number of plants you will be putting in the beds.
- › Each bag of Blueberry Success Mix will fill approximately 1 cubic foot of container.
- › Fertilize your blueberry plants with an acid blend of fertilizer approximately 6 months after planting and add more mix as mulch over the bed itself.
- › Remember that blueberries require consistent soil moisture, so incorporating an irrigation kit would be beneficial.
- › See your plants growing instructions to get moisture and spacing requirements.

### **Existing Plants:**

#### **Incorporate into soil:**

- › Either dig out the top 4 to 6 inches of soil around your plants and fill back in with the mix or,
- › Mix into the top layer of soil (4-6 inches) at a ratio of approximately 50:50.
- › Use some as a mulch over top of planting area and soil.

#### **As mulch:**

- › Can be used as a mulch for established plants and beds.
- › Layer the Blueberry Success Mix 1 to 4 inches thick on beds and gardens.

- › Re-apply each year for best results.
- › Circle acid loving shrubs with a 1 to 4 inch thick layer.
- › Will provide weed control as well as humus and nutrients for your soil and plants.

**Ingredients:** pine bark, peat moss, aquagro wetting agent, (Shrubs Alive for Acid Loving Trees & Shrubs)(fertilizer).

Will fill 8 - 10 inch individual gallon pots.

One bag will fill a 5 gallon bucket.

As the product breaks down, the PH will be reduced in the soil to a lower PH of approximately 5.5.
