

## Vegetable Food

1. Broadcast over the soil at the rate of one pound per 33 square feet, and till into seed bed about three weeks before sowing seed. NOTE: If you apply Vegetable Food when you sow seed, the germination rate may decrease.

**OR**

2. Apply as a side-dressing in a shallow trench next to the row, at the rate of one cup per 25 feet of row. This is the most economical method of application. Apply two tablespoons per plant for individual transplants. For optimum results, apply a second feeding, of 1/2 to 1 cup per 25 ft. of row, at the time the plant is beginning to flower.
