

Reason for the increase of the outstanding shares by 78,947,368

On 22 February 2011, Highline Technical Innovations issued 78,947,368 to raise approximately \$100,000. These funds are being used for independent 3rd party testing on HTI's Wildcat system, purchase of a handheld 5-gas analyzer, production facility expansion and legal fees. The company will continue providing supplemental information to Pinksheets in the event of future share structure changes. HTI has chosen to use the same funding source it has used in all previous transactions because the funder has been conscientious in regards to share price. The intent of the company is to keep shareholders informed of what kind of transactions take place with the share structure and what the monies are used for when and if shares are issued.
