

Environmental Regulation

Kelley Drye advises clients in regulatory matters and transactions, capitalizing on our industry knowledge, environmental experience, and familiarity with the way key risks can evolve into litigation or enforcement actions.

About

We draft, analyze, and negotiate environmental indemnity and assumption provisions in a multitude of contexts. Additionally, our attorneys provide environmental and other due diligence analysis for companies contemplating sales and acquisitions. We are able to provide our clients with critical investigative and risk analysis for these important business decisions.

On the operational side, our lawyers assist with permits for construction and operation of new air sources, wetlands and water quality certifications, and pipeline construction authorizations, among others. Our experience also extends to counseling clients subject to enforcement under the Clean Water Act and Oil Pollution Act arising from leaks and spills.
