

# Legal and Privacy Consideration Concerning Wearable Technology

December 2, 2020

The phenomenon known as the Internet of Things has disrupted technology and created a convergence of data and innovation potential. Along with it, a host of legal issues arise relating to the regulatory agencies that oversee IoT products, such as wearable technology, consumer privacy implications, and the use and storage of vast amounts of passively-collected data. This session serves as a regulatory primer for any company considering entering or already operating in the IoT space.
