

PowerUP Energy Thought Leaders Quarterly Forum: The Evolving Energy System

Kelley Drye Seminar

Firm Event

March 4, 2014

Chicago

The Conference Center

Chicago, IL

On March 4, 2014, Kelley Drye & Warren and Navigant Consulting presented the second in a series of quarterly leadership programs structured to provide a high-level interactive, discussion, and analysis on some of the most pressing topics within the energy industry. This and future events will explore various aspects of The Evolving Energy System, including:

- A changing **energy supply** base (shale gas, renewables)
- Technology advancements in **energy delivery** (smart grid, microgrids)
- Emerging alternatives for **energy end use** (distributed generation, demand-side management, alternative fuel vehicles)

This session introduced the landscape of the evolving energy system and provided a variety of perspectives from industry leaders in three key segments: a regulated utility, an unregulated energy business, and a large energy end user.

This forum brought together some of the Region's most prominent thought leaders including C-level executives, in-house counsel from Midwest-based energy companies, service providers, and investors in energy companies. Each session was highly participatory and concluded with a networking reception.

The **Evolving Energy System** session included panel speakers **Val Jensen**, SVP, Customer Operations, ComEd; **Felipe Arrazola**, VP of Finance, SoCore Energy; and **Pete Scarpelli**, VP, Global Leader of Energy Services, CBRE.
