

The Future of Voice Services: How a Changing Interoperability Landscape Is Impacting Competition and Trusted Communications

The 2025 INCOMPAS Policy Summit

Speaking Engagement

March 11, 2025 from 8:30 am to 5:30 pm (EDT)

Partner [Henry Kelly](#) will be a panelist on "The Future of Voice Services: How a Changing Interoperability Landscape Is Impacting Competition and Trusted Communications" at the 2025 INCOMPAS Policy Summit in Washington, DC.

As telecommunications providers accelerate the retirement of copper-based voice services in favor of IP-enabled alternatives, significant challenges arise for both consumers, regulators and providers. This panel will address the multifaceted issues linked to this changing interoperability landscape, including the impact such a transition would have on unwanted robocall and robotext mitigation, public safety initiatives and trusted communications. Speakers will discuss the need for updated policies that reflect technological advancements and debate how the FCC will address this transformation, while also safeguarding the public interest and competition.
