

The Washington Post Quotes Kelley Drye's Dave Frulla

March 29, 2021

The White House on Monday detailed an ambitious plan to expand wind farms along the East Coast and jump-start the country's nascent offshore wind industry, saying it hoped to trigger a massive clean-energy effort in the fight against climate change.

Fishing operators also have raised concerns about the impact of wind farms in the Atlantic Ocean, an area critical to the seafood industry.

Partner [David Frulla](#), who represents the trade association for the Atlantic scallop fishery, was quoted in *The Washington Post* discussing the risks posed by offshore wind development plans.

For example, the southeast tip of an area the administration has identified in the New York Bight called Hudson North intersects with a scallop fishing spot, he said. The eastern perimeter of a second area, Hudson South, is just at the edge of an important area for scallops, Frulla said. Altogether, the scallop catch in the New York Bight is worth tens of millions of dollars, he said.
