**Did you know?**

FIVE HEVEA BRASILIENSIS TREES GROWN, HARVESTED IN THE TIME ONE OAK TREE IS READY TO BE MILLED.

This demonstrates the sustainability of this natural resource. Although many logging companies are using forestry management practices now, which is a good start, it only includes planting 6 oak seedling trees for every one cut down. This provides an argument for those practicing this, that there are more trees than ever. Yet, it will still take at least 60 years for one of these trees to reach a harvestable diameter. In this time, 3 full-sized HB trees could be harvested and ready for production.

This is the best way to sustain a wood supply for continued furniture production without depleting the world's forests.
