

## Utah

Maternal mortality rates in the United States are rising. The U.S. has the highest rate of maternal death among developed nations with significant racial disparities and large differences in rates between states. The Society for Maternal-Fetal Medicine (SMFM) has identified four important ways that states are addressing the rising rates of maternal mortality: 1.) the establishment of maternal mortality review committees; 2.) the establishment of perinatal quality collaboratives; 3.) the expansion of Medicaid; and 4.) reporting of data stratified by race/ethnicity. This fact sheet details the progress Utah has made towards reducing maternal mortality. To view other state fact sheets, visit [SMFM.org/scorecard](http://SMFM.org/scorecard).

### State Activities Aimed at Reducing Maternal Deaths

### Insurance Coverage for Reproductive-Aged Women

**89%** of women aged 19-64 years old have health insurance.

Utah's Medicaid program will cover pregnant women up to 144% of the federal poverty level.

Race	Utah	USA
White	23.9	26.1
Black	--	63.8
Hispanic	28.1	19.6
Overall	23.0	29.6

Hispanic women in Utah are 40% more likely to die from pregnancy-related causes than Hispanic women in the rest of the country.
