

Georgia

Maternal mortality rates in the United States are rising. The U.S. has the highest rate of maternal death among developed nations with significant racial disparities and large differences in rates between states. The Society for Maternal-Fetal Medicine (SMFM) has identified four important ways that states are addressing the rising rates of maternal mortality: 1.) the establishment of maternal mortality review committees; 2.) the establishment of perinatal quality collaboratives; 3.) the expansion of Medicaid; and 4.) reporting of data stratified by race/ethnicity.

This fact sheet details the progress Georgia has made towards reducing maternal mortality. To view other state fact sheets, visit SMFM.org/scorecard.

State Activities Aimed at Reducing Maternal Deaths

Insurance Coverage for Reproductive-Aged Women

83% of women aged 19-64 years old have health insurance.

Georgia's Medicaid program will cover pregnant women up to 225% of the federal poverty level.

Maternal Mortality Ratio (number of maternal deaths per 100,000 live births)

Race	Georgia	USA
White	59.7	26.1
Black	95.6	63.8
Hispanic	26.1	19.6
Overall	66.3	29.6

Georgia's MMR is double the country's MMR and coupled with an increased risk for pregnancy-related deaths in every racial and ethnic group.
