Maternal mortality rates in the United States are rising. The U.S. has the highest rate of maternal death among developed nations with significant racial disparities and large differences in rates between states. The Society for Maternal-Fetal Medicine (SMFM) has identified five important ways that states are addressing the rising rates of maternal mortality: 1) the establishment of maternal mortality review committees, 2) the establishment of perinatal quality collaboratives, 3) the expansion of Medicaid, 4) reporting of maternal death data stratified by race/ethnicity, and 5) participation in the Alliance for Innovation on Maternal Health program. This fact sheet details the progress Alaska has made toward reducing maternal mortality. To view other state fact sheets, visit SMFM.org/scorecard.

Postpartum Medicaid Extension
SMFM recommends that states provide 12 months of comprehensive postpartum Medicaid coverage to all new mothers.

| No Extension | Enacted | Implementing Limited Coverage Extension | Implementing Full Coverage Extension |

State Actions Aimed at Reducing Maternal Deaths

Maternal Mortality Review Committees
- Gather and analyze data and
- Make recommendations

Driving Action by

Perinatal Quality Collaboratives
- Build the infrastructure for and advance system-wide quality improvement efforts

AIM
- Implement patient safety bundles

Policymakers
- Advance policy reforms, including expanding and extending Medicaid coverage
