

Nebraska

Maternal mortality rates in the United States are rising. The U.S. has the highest rate of maternal death among developed nations with significant racial disparities and large differences in rates between states. The Society for Maternal-Fetal Medicine (SMFM) has identified four important ways that states are addressing the rising rates of maternal mortality: 1.) the establishment of maternal mortality review committees; 2.) the establishment of perinatal quality collaboratives; 3.) the expansion of Medicaid; and 4.) reporting of data stratified by race/ethnicity. This fact sheet details the progress Nebraska has made towards reducing maternal mortality. To view other state fact sheets, visit SMFM.org/USA.

State Activities Aimed at Reducing Maternal Deaths

- ✗ Maternal Mortality Review Committee
- ✓ Perinatal Quality Collaborative
- ✗ Medicaid Expansion
- ✗ Reports Maternal Mortality Data by Race

Rate of Maternal Mortality per 100,000 Live Births

Race	Nebraska	USA
White	17.6	18.1
Black	N/A	47.2
Hispanic	N/A	12.2
Overall	16.8	20.7

Black women are nearly three times more likely to die from pregnancy-related causes than white women in the U.S. Nebraska reports limited data stratified by race/ethnicity.
