

North Carolina

Maternal mortality rates in the United States are rising. The U.S. has the highest rate of maternal death among developed nations with significant racial disparities and large differences in rates between states. The Society for Maternal-Fetal Medicine (SMFM) has identified four important ways that states are addressing the rising rates of maternal mortality: 1.) the establishment of maternal mortality review committees; 2.) the establishment of perinatal quality collaboratives; 3.) the expansion of Medicaid; and 4.) reporting of data stratified by race/ethnicity. This fact sheet details the progress North Carolina has made towards reducing maternal mortality. To view other state fact sheets, visit SMFM.org/USA.

State Activities Aimed at Reducing Maternal Deaths

- ✓ Maternal Mortality Review Committee
- ✓ Perinatal Quality Collaborative
- ✗ Medicaid Expansion
- ✓ Reports Maternal Mortality Data by Race

Exists in the State

Rate of Maternal Mortality per 100,000 Live Births

Race	North Carolina	USA
White	11.9	18.1
Black	29.9	47.2
Other	N/A	23.8
Overall	20.7	20.7

Black women are nearly three times more likely to die from a pregnancy-related cause than white women. In North Carolina, disparities between black and white women exist, but are not as stark as the national average.
