

MATERNAL MORTALITY FACTS & FIGURES

South Carolina

Maternal mortality rates in the United States are rising. The U.S. has the highest rate of maternal death among developed nations with significant racial disparities and large differences in rates between states. The Society for Maternal-Fetal Medicine (SMFM) has identified four important ways that states are addressing the rising rates of maternal mortality: 1.) the establishment of maternal mortality review committees; 2.) the establishment of perinatal quality collaboratives; 3.) the expansion of Medicaid; and 4.) reporting of data stratified by race/ethnicity. This fact sheet details the progress South Carolina has made towards reducing maternal mortality. To view other state fact sheets, visit SMFM.org/USA.

State Activities Aimed at Reducing Maternal Deaths

- ✓ Maternal Mortality Review Committee
- ✓ Perinatal Quality Collaborative
- ✗ Medicaid Expansion
- ✓ Reports Maternal Mortality Data by Race

Exists in the State

Does Not Yet Exist

In Progress

Medicaid Coverage for Pregnant Women

South Carolina's Medicaid program will cover pregnant women with family incomes up to 199% of the federal poverty level (FPL). In 2018, the FPL for a family of three is \$20,780.

Rate of Maternal Mortality per 100,000 Live Births

Race	South Carolina	USA
White	13.8	18.1
Black	56.7	47.2
Other	N/A	23.8
Overall	26.5	20.7

Black women are nearly three times more likely to die from a pregnancy-related cause than white women in U.S. In South Carolina, the discrepancy is even greater; the rate of death among black women is more than four times higher than that of white women.
