

California

Maternal mortality rates in the United States are rising. The U.S. has the highest rate of maternal death among developed nations with significant racial disparities and large differences in rates between states. The Society for Maternal-Fetal Medicine (SMFM) has identified four important ways that states are addressing the rising rates of maternal mortality: 1.) the establishment of maternal mortality review committees; 2.) the establishment of perinatal quality collaboratives; 3.) the expansion of Medicaid; and 4.) reporting of data stratified by race/ethnicity. This fact sheet details the progress California has made towards reducing maternal mortality. To view other state fact sheets, visit SMFM.org/scorecard.

State Activities Aimed at Reducing Maternal Deaths

Maternal Mortality Ratio (number of maternal deaths per 100,000 live births)

Race	California	USA
White	17.0	26.1
Black	63.9	63.8
Hispanic	14.6	19.6
Overall	17.6	29.6

Black women in California are nearly four times more likely to die from pregnancy-related causes than white women.
