

## New Jersey

Maternal mortality rates in the United States are rising. The U.S. has the highest rate of maternal death among developed nations with significant racial disparities and large differences in rates between states. The Society for Maternal-Fetal Medicine (SMFM) has identified four important ways that states are addressing the rising rates of maternal mortality: 1.) the establishment of maternal mortality review committees; 2.) the establishment of perinatal quality collaboratives; 3.) the expansion of Medicaid; and 4.) reporting of data stratified by race/ethnicity. This fact sheet details the progress New Jersey has made towards reducing maternal mortality. To view other state fact sheets, visit [SMFM.org/scorecard](http://SMFM.org/scorecard).

### State Activities Aimed at Reducing Maternal Deaths

### Insurance Coverage for Reproductive-Aged Women

**90%** of women aged 19-64 years old have health insurance.  
 New Jersey's Medicaid program will cover pregnant women up to 199% of the federal poverty level.

### Maternal Mortality Ratio (number of maternal deaths per 100,000 live births)

Race	New Jersey	USA
White	34.7	26.1
Black	131.8	63.8
Hispanic	31.9	19.6
Overall	46.4	29.6

Black women in New Jersey are nearly four times more likely to die from pregnancy-related causes than white women.
