technical details

FOSCARINI

Aplomb wall lamp is an exploration of the expressive possibilities of rough concrete made fluid in its mould and thrilling to see and touch thanks to its special amalgam. Like the original suspension model, the Aplomb wall lamp seems to come from another dimension: from the world of architecture and building - echoed in its raw material - to the domestic environment. The oblique movement of the diffuser merges into and dialogues with its supporting structure and allows for wider ranging light diffusion. The concrete blocks the light completely and then releases it from both the large opening at the top and the smaller one at the bottom. The beam of light directed upwards is reflected onto the walls and ceiling, lighting up the room without ever dazzling. The more delicate beam of light directed downwards, by contrast, creates a sophisticated interplay of light on the walls. Aplomb wall lamp is available in grey, a colour which highlights the materials used to make it, an elegant white and a warm brown colour. It is ideal in all rooms which speak a direct, minimalist architectural language especially if they make use of visible rough-hewn materials individually or in perspective sequences along walls or corridors.
