

Name _____ Date _____

Bead Bracelet Observations

Wear your bracelet for the next 24 hours. Make observations when you change locations or the conditions change. Note what happens when you are eating, taking a shower, doing your homework, playing outside, watching TV, reading, or walking to school. What happens when your bracelet is cold, warm, wet, or dry? What happens when you are active or still?

Time	Place/Activity	Conditions	Observation
2:00 PM	Classroom	Room temperature, dry, indoor light	The beads are white

What did you notice happen to your bead bracelet? _____

What do you think caused the change to occur? _____

How will you test your hypothesis? _____
