SPECIAL OBSERVATIONS:

Participants displayed high cognitive ability and great teamwork reflexes. We observed the creation of a bridge between existing, well-organized clusters; they're already showing a great capability to adapt. Innovative thinking and quick reflexes even led to the creation of automated scripts to monitor the pre-launch phase. Investigation in the current available assets reveal great proactivity. Sample is still very limited. Cohesiveness and inclusion of new participants during the active phases are likely to be key to our success.

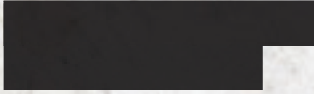

Based on this initial response, difficulty recalibration is in progress. Escalation will occur rapidly, to better gauge if the participants are up to the extreme nature of the problems waiting in later phases.

Let me reiterate that I still think this is much too risky. We don't have time for this, Elizabeth.
