

TESTING is important.

Your child's CHECK UP may include many different forms of testing in the office.

It could be a lab test, a vision test, or hearing test.

It may even be a paper test or survey you fill out and the doctor then scores.

Unfortunately, they MAY not be covered by your health insurance.

If your insurance doesn't pay you may receive a nominal bill for negotiated insurance reimbursement amount for these services.

Our providers feel all these are very important to your child's health and follow the AAP recommendations to perform these tests during your child's annual checkups.
