2017 Financially Underserved Market Size Study
December 2017

Eric Wilson, Associate
Eva Wolkowitz, Manager
About the 2017 Financially Underserved Market Size Study

CFSI presents this seventh annual market analysis to illustrate the size of the opportunity to address the needs of financially underserved consumers and identify significant trends driving marketplace evolution and growth.

The study presents a snapshot of:
- Interest and fees spent by underserved consumers to borrow, spend, save, and plan
- Volume of consumer usage generating revenue
- Current and projected revenue growth rates
- Key trends driving market developments

This report does not constitute a commentary on the appropriateness, safety, or quality of specific financial products for consumers. Market size and growth rates are not endorsements of market well-being for providers or financial health impact for consumers.

This is the property of CFSI, all rights reserved. In the citation of this work, please include the attribution: “The 2017 Market Size Study is presented by CFSI”.

By the Numbers: Highlights of the $173 Billion Market*

Overall market revenue grew by $10.7 billion or 6.6% from 2015 to 2016.**

The market is projected to expand 8.3% in 2017 to $188 billion.

Consumers spent $173 billion in fees and interest to use $1.94 trillion in financial services.

The study includes 29 financial products in 2017, including new additions: Retail Credit Cards and In-Person Domestic Money Transfer.

Fastest Growing Products
Nonbank Small Business Loans grew at 86.8%, and Title Loans grew at 31.0%, while all types of credit cards covered in this report—Retail, Secured, and Subprime—round out the top five at 20.2% to 28.5% growth.

Products in Sharpest Decline
In-Person Domestic Money Transfer saw the sharpest decline falling 27.0%, while Buy-Here-Pay-Here (BHPH) Auto Loans dropped 14.5%.

Largest Product Segments
Retail Credit Cards—a new product added to the report this year***—constituted the largest product segment at $33.2 billion in 2016, followed by Subprime Auto Loans at $27.8 billion and Overdraft at $24.5 billion.

* All figures in this report are the result of original research and analysis by CFSI unless otherwise sourced. See appendix for list of sources.
** Updates reflect revised revenue estimates for previous report years. See New Additions and Changes to 2017 Market Sizing on appendix pages 53-54 for full explanation.
*** All additional products added to report are also added to previous annual sizing figures for clear comparison of growth rates. See appendix pages 52-53 for more details.
Key Trends in Context

**Major Findings in the 2017 Financially Underserved Market Size Study**

**Credit Cards in the Underserved Market: How do they Stack up?** Underserved consumers use a variety of credit cards—including Retail, Subprime and Secured Cards—to meet their short-term credit needs and build credit. Yet uptake of these card types, as well as features and functionality, vary widely.

**Frequent Overdraft: A Financial Health Tipping Point?** Overdraft fees are an occasional cost for most account holders, but a small percentage of users account for three fourths of all fees and often find their account standing in jeopardy. Is Overdraft a product ripe for innovation or disruption to address very small liquidity shortfalls and promote consumer stability?

**FinTech Solutions Make Inroads: New Channels Beyond the Storefront** As a greater share of underserved consumers gain access to digital financial services through mobile phones and computers, some products traditionally offered at storefronts are rapidly migrating to online formats, or poised to make the leap at greater scale.

**Questions of Credit Pricing: To Underwrite or not to Underwrite?** The burdens of traditional underwriting can be prohibitive for small loans, but innovations to streamline the process offer opportunity to better address the unmet credit needs of consumers using credit products that are typically risk-agnostic in pricing and provision.

**Small Business Finance: Credit Access Meets Untapped Potential** A large share of small businesses struggle to access credit needed to put down roots and grow. Nonbank lenders are scaling fast as more small business borrowers turn to new types of lenders, eager to access credit, tailored financial management solutions, and more.
Defining the Market: Who are Underserved Consumers?

Underserved consumers may struggle with one, two, or all three of these financial challenges.*

Consumers that face barriers to using mainstream financial products effectively due to low-to-moderate incomes or income volatility, circumstances that impact approximately 67 million and 54 million U.S. adults, respectively.

Consumers struggling with LMI or volatile incomes

Credit-challenged consumers with thin-to-no credit file or a subprime score

Consumers that struggle with access to mainstream financial products that meet their needs. This group is estimated at 67 million adults by the FDIC.

Unbanked or underbanked consumers (FDIC designation)

Consumers that are credit-challenged have subprime credit scores below 600, or are unscorable due to a lack of sufficient credit file information. There are approximately 91 million U.S. adults who are credit-challenged.

*Due to disparate data sets focused on each consideration of financially underserved status, it is not possible to identify the aggregate count of all underserved individuals collectively.

Sources: LMI adults are those with household incomes at or below 200% of the federal poverty threshold as defined by the United States Department of Health and Human Services, Office of the Secretary, Annual Update of the HHS Poverty Guidelines, January 2016, and reported annually by the United States Census Bureau, Income and Poverty in the United States, 2016 update, table 5. Unbanked, Underbanked, and Income Volatility: 2015 FDIC National Survey of Unbanked and Underbanked Households, FDIC, 2016. Credit Challenged: 53 million U.S. individuals are unscorable due to thin or nonexistent FICO credit file data, while 20% of those with FICO scores, or 38 million people, have scores below 600. Expanding Credit Opportunities, FICO, 2017; US Average FICO Score Hits 700: A Milestone for Consumers, FICO, April 2017.
Defining the Market: Who are Underserved Consumers?

The Nexus of Financially Underserved Consumers and Financial Health

Financial health challenges extend beyond the underserved market. CFSI’s Consumer Financial Health Study found that 57% of U.S. consumers, or approximately 138 million adults, are financially unhealthy.

While all financially unhealthy Americans could benefit from higher-quality financial products and services, this annual report focuses specifically on the financially underserved. These are the consumers with the most acute need for financial products and practices that meet their financial health challenges.

Source: Consumer Financial Health Study, CFSI, 2015
In order to improve consumer financial health, especially for the underserved, the market must address consumer need for day-to-day financial systems that function well alongside products that increase resilience and the ability to pursue opportunity. This requires a robust and innovative financial services market.

Adopting a financial health strategy can allow companies to invest in their customers’ financial well being, inspiring loyalty and long-term engagement while creating responsible and sustainable profits over time. CFSI has outlined seven stages that can guide this financial health journey.

Source: The Journey To Financial Health: Your Company’s Roadmap, CFSI, 2017
Defining the Underserved Market

Financial Product Criteria & Opportunity

This report examines 29 products that underserved consumers use to spend, save, borrow, and plan in their financial lives.

Some products in this report, such as checking accounts or auto loans, are also widely used by consumers who are not traditionally defined as underserved. In these cases, measuring the underserved market size only focuses on usage volume and revenue generated by those who meet the criteria for financially underserved individuals. Accounting for market revenue in this way allows for a specific examination of spending on financial products and services by individuals who are more likely to be vulnerable to financial health challenges.

This methodology pinpoints the opportunity to improve the financial health of underserved consumers. Today, 21 Financial Health Leaders and counting are working with CFSI to assess the financial health of their customers, employees, or clients using CFSI’s eight key indicators.

CFSI’S Indicators of Financial Health:

- **SPEND**
  1. Spend less than income
  2. Pay bills on time and in full

- **SAVE**
  3. Have sufficient liquid savings
  4. Have sufficient long-term savings or assets

- **BORROW**
  5. Have a sustainable debt load
  6. Have a prime credit score

- **PLAN**
  7. Have appropriate insurance
  8. Plan ahead for expenses

Eight Ways to Measure Financial Health, CFSI, 2016
Product Category Revenue & Growth
Spending By Underserved Consumers in U.S. Hits $173 Billion

Breakdown by Product Category Revenue and Growth

In 2016, underserved consumers spent $173.2 billion on fees and interest across five financial product categories.

**Single Payment Credit**
Loan products for which payment is due in one lump sum, typically with terms of one month or less.

**Short-Term Credit**
Loan products that function on an installment basis with terms from several months to 1-2 years or as a line of revolving credit.

**Long-Term Credit**
Loan products that function on an installment basis with typical terms longer than 2 years.

**Payments & Deposit Accounts**
Products that enable consumers to transact, convert, send, receive, deposit, and hold funds.

**Other Products & Services**
Other personal financial management products and services.

---

2016 Fee & Interest Revenue: $173.2 Billion

- **Single Payment Credit**: $17.3 B
- **Short-Term Credit**: $57.9 B
- **Long-Term Credit**: $51.7 B
- **Payments & Deposit Accounts**: $39.4 B
- **Other Products & Services**: $6.9 B
In 2016, underserved consumers spent $39.4 billion on fees and interest for single payment loan products due in one lump sum, typically with terms of one month or less.

This represents a 3% decrease from the previous year. The decline is projected to slow, decreasing by 0.4% in 2017, primarily driven by resumption of moderate growth in Pawn revenue after retraction in 2016.
In 2016, underserved consumers spent $57.9 billion on fees and interest for short-term loan products that function on an installment basis with terms from several months to 2 years or as a line of revolving credit.

This represents a 23.5% annual growth rate since the previous year. Growth is projected to continue with a less dramatic increase of 14.8% in 2017 as growth slows for all but Installment Loans and Rent to Own, which each indicate a rebound in volume of sales driving higher revenues.

For complete definitions of products, see Appendix.

©2017 Center for Financial Services Innovation. All rights reserved
In 2016, underserved consumers spent **$51.7 billion** on fees and interest for long-term loan products that function on an installment basis with typical terms of 2 years or more.

This represents a **2.7% annual growth rate** since the previous year. Growth is projected to **accelerate to 11.7%** in 2017 due to resumption of stronger growth in Personal Marketplace Loan originations and a reversal of decline in Buy Here Pay Here Auto Loan volume of sales.

For complete definitions of products, see Appendix.
In 2016, underserved consumers spent $17.3 billion on fees to transact, convert, send, receive, deposit, and hold funds.

This represents a **1.6% annual rate of decrease** since the previous year. A slight **decrease of 0.2% is projected** in 2017 as well, pushed toward neutral growth by increases in Checking Account fee spending, GPR Prepaid volume of usage, and an uptick in Money Order transactions.
In 2016, underserved consumers spent **$6.9 billion** on fees and penalties for financial services to prepare taxes and borrow or withdraw funds early from retirement accounts. This represents a **decrease of 2.2%** compared to the previous year. The downward trajectory is projected to slow, with a **decrease of 0.7%** in 2017 due to slightly lower utilization of retirement plan borrowing.

For complete definitions of products, see Appendix.
Growth and Projections by Product
Single Payment Credit

Online and Storefront Payday Loans both declined in 2016 and are projected to decline again in 2017, while Pawn is expected to return to a steady state after experiencing declining growth in 2016. RACs grow moderately in both 2016 and 2017, while spending on Overdraft fees grows modestly.

Short-Term Credit

Nonbank Small Business Loans are growing quickly, although their total size is still relatively small, while Auto Title Loans, Retail, Subprime, and Secured Credit Cards each displayed robust growth in 2016, and will continue growth at slightly lower rates in 2017. Installment loans, after experiencing a slight decline in 2016, are expected to rebound in 2017, while Rent to Own declines in 2016 and also shows signs of slowing to a steady state in 2017.
Product Growth and Growth Projections

Long-Term Credit

Subprime Auto Loans continue to drive the largest growth in long-term credit, while BHPH Auto Loans are projected to grow substantially in 2017 after declining in 2016. Personal Marketplace Loans experienced lower growth in 2016 but are projected to recharge their growth to a moderate level in 2017 and remain a small but scaling part of the market. Private Student Loans show continued growth in 2016 and projected for 2017.

Payments & Deposit Accounts

Check Cashing and Prepaid Payroll Cards demonstrate continuing moderate revenue growth in 2016 and projected for 2017, while declines in spending both years will impact Government Benefit Prepaid Cards, Walk-in Bill Pay, and In-Person Domestic Money Transfer most dramatically. After lower growth in 2016, GPR Prepaid Cards, Money Orders, and Checking Accounts are projected to reflect slightly accelerated spending in 2017, while Remittance and Bank Account Savings growth is lower in 2017 projections than it was in 2016.
Other Products & Services

Spending on Tax Preparation fees is expected to decline slightly as fewer consumers use storefront preparatory services, where prices continue to rise, in favor of online tax services, which typically feature lower pricing and are not sized in this report. Retirement Plan Leakage fees, which remained relatively flat in 2016, are projected to decline slightly in 2017 due to lower utilization.
Market Trends
Credit Cards in the Underserved Market: How do they Stack up?
Spending on credit cards often used by underserved consumers has grown rapidly for several years in a row, ranging in 2016 from an increase of 23.1% for Subprime Credit Cards to 28.5% for Retail Credit Cards.

Retail Credit Cards—a product newly added to the report this year—are the most ubiquitous credit card option for those with FICO scores below 700. In 2016, consumers spent $33.2 billion on these cards, which tend to feature easy enrollment and less stringent approval requirements than prime rate credit cards, as well as lower credit limits and higher interest rates in comparison. Often, they can only be used for transactions with the issuing retailer.
Retail cards resemble subprime cards in terms of both average balance and interest rate. But with an estimated 188 million open accounts serving 125 million cardholders in 2016, they far outstrip Subprime and Secured cards when it comes to account ownership and total volume of account balances.

More forgiving underwriting standards may play a role in the popularity of Retail Credit Cards among underserved consumers. Teaser promotions, such as offers of no interest for an initial period, or a discount on a large purchase at signup, can also aid in driving retail sales and loyalty.

For those who carry a balance month-to-month or fail to completely pay off their balance within a promotional period, spending can quickly increase due to interest rates of double the national average for all types of credit cards.

**Retail Credit Cards: A New Addition to Sizing the Underserved Market**

This product was added to our report—for 2016 and all previous years retroactively—because usage and spending as demonstrated by average balances and interest rates are similar to that of Subprime Credit Cards, an indication that consumers may meet similar credit needs using Retail Credit Cards. For more information, see New Additions and Changes to 2017 Market Sizing in the appendix.

**Sources:** The Secured Credit Card Market, Payment Cards Center, Federal Reserve Bank of Philadelphia, 2016; 2017 Credit Card Landscape Report, WalletHub, 2017; Retail Store Card Survey, CreditCards.com, 2017; Consumer Credit Table G.19, Board of Governors of the Federal Reserve System, 2017.
Ninety-one million U.S. consumers have FICO scores below 600 or are unscorable due to thin file information or no file at all – that’s more than one third of all potential credit score holders.

The opportunity to build or repair credit can mean access to a range of credit products– including prime rate credit cards–that feature lower rates and better terms for managing short-term or revolving credit needs.

A recent study by the Federal Reserve Bank of Philadelphia Card Payments Center reports that use of Secured Credit Cards, which serve primarily to build credit while offering access to a credit card product, are on the rise, increasing at a compound annual rate of 24% from 2012 to 2015 alone.

CFSI Secured Credit Card research found 60% of account holders cited the desire to build or rebuild credit as a motivating factor in opening a card. Fifty-seven percent reported an increase in credit score while using their secured card.

Sources:
- Expanding Credit Opportunities, FICO, 2017;
- US Average FICO Score Hits 700: A Milestone for Consumers, FICO, April 2017;
- The Secured Credit Card Market, Payment Cards Center, Federal Reserve Bank of Philadelphia, 2016;
- Secured Credit Cards: Innovation at the Intersection of Savings and Credit, CFSI, 2016.
Spotlight on Secured Cards: Credit-Building Potential in Higher Uptake

The Federal Reserve study found sustained use of secured cards have a measurable impact on card users’ credit scores, which **increased an average of 24 points** for the 82% of accounts that remained open after two years.

For cards closed during the two year period, regardless of whether balances were paid off prior to closure, users’ **credit scores decreased an average of 52 points**.

While 94% of those with open accounts retained active status, these users encompass at most 4% of the potential market for credit-challenged consumers.

Opportunity to further attract and engage those motivated to build credit may lie in creating stronger incentives that replicate some aspects of Unsecured Card user perks. Only 12% of Secured Credit Cards surveyed in the Federal Reserve’s study offer rewards programs, compared to 47% of Unsecured Credit Cards.

CFSI’s Secured Credit Card research found that rewards such as coupons, points, or cash back were the most-requested additional feature, desired by 47% of current account holders, followed by credit score or report information, desired by 29% of account holders.

Frequent Overdraft: A Financial Health Tipping Point?
Frequent Overdrafters Drive Overall Market Revenue…

The Consumer Financial Protection Bureau (CFPB) reports that only 8.3% of all checking accounts experience more than ten overdrafts annually. Yet this small subset of most frequent overdrafters represents approximately 75% of all overdraft revenue each year.

In 2016, these consumers spent $24.5 billion on overdraft fees, an amount that constitutes 62% of all spending by underserved consumers on Single Payment Credit products.

Source: Data Point: Frequent Overdrafters, Consumer Financial Protection Bureau, 2017
Recent academic research into bank account activity data reveals that **checking account closure** was more than twice as common for those who overdraft most frequently. **Twenty-three percent** of the top quintile of overdrafters closed their account within 15 months, compared to only **11%** for other account holders.

**Involuntary account closures** were also nearly twice as likely for this top quintile, measured at **86%** compared to **47%** for other account holders. This suggest that very frequent overdrafters struggle to maintain a checking account in good standing.

Of consumers whose overdraft frequency is in the **top 20%**...

...**23.4%** close their accounts within 15 months...

...of those, **86.3%** see their accounts closed involuntarily.

Underserved Overdraft users—those who overdrafted ten or more times per year—did so to address relatively small shortfalls in liquidity, experiencing total negative balances of only $521 per user throughout 2016.

Their 825 million overdrawn transactions represent a key marginal segment within the underserved population: those with short-term liquidity constraints who remain tenuously attached to the traditional banking system.

Less than half of overdrafters prefer this product for addressing short-term liquidity needs, indicating opportunity for financial institutions to explore alternative credit solutions that allow frequent overdrafters to better manage temporary shortfalls while maintaining an active banking relationship.

Source: Checking Overdraft and the Voice of the Consumer, Novantis, 2015
Questions of Credit Pricing:
To Underwrite or not to Underwrite?
Missed Opportunity in One-Size-Fits-All Rates and Fees

Underserved consumers often face challenges in part due to low credit scores or lack of a scoreable credit file, a barrier that impacts 91 million U.S. consumers. Many of these consumers may benefit from alternative measurements of borrower risk to increase their access to credit. There is broad market opportunity for innovations that can perform basic underwriting at low cost or report to credit bureaus, as many credit products that address gaps in liquidity do not price interest and fees according to risk or provide credit-building opportunities.

*Frequent Overdrafters >10 times per year  **Online and Storefront Payday Loan data combined
In October 2017, the CFPB announced its Final Rule regarding Payday, Vehicle Title, and Certain High Cost Installment Loans, mandating that some types of single-payment lenders assess borrowers’ ability repay their loans before qualification or otherwise meet prescribed provisions to safeguard consumers’ ability to repay. After several years of industry speculation, the Bureau released its initial version of this rule in June 2015, contributing to a steep decline in payday lending revenue as industry providers shifted to Installment, Auto Title, Pawn, and other models to provide Short-Term Credit in anticipation of regulatory changes. The final rule is set to go into effect 21 months after issue, in spring of 2019.

Simultaneous action during October 2017 by the Office of the Comptroller of the Currency rescinded 2013 “Guidance on Supervisory Concerns and Expectations Regarding Deposit Advance Products,” that effectively prevented banks from offering Deposit Advance single payment loans as a payday loan alternative. This means the future holds renewed opportunity for financial institutions to address the consumer need for Short-Term and Single Payment Credit with the context of a banking relationship.
Small Business Finance: Credit Access Meets Untapped Potential
Data Continue to Show Supply Shortfall in Small Business Credit

An annual Federal Reserve survey found between 56% and 71% of small businesses with revenues of less than one million dollars failed to receive the full amount of credit requested on loan applications over the past three years, although 70% sought less than $100,000 in financing in 2016.

Forty-four percent of all small businesses surveyed reported securing financing as a top challenge. Respondents also reported high levels of personal assets and guarantees used to secure business debt.

55% Small business credit applicants who used a personal guarantee in 2016

37% Small business credit applicants who relied on personal assets as collateral in 2016

Opportunity to Address Small Business Credit Demand Continues

Small businesses are increasingly seeking out nonbank online lenders as a source of credit. Nonbank lenders were preferred by over one quarter of small businesses with revenues of under one million dollars in 2016, up from 18% just two years earlier.

Nonbank small business lending revenue, dominated by online lenders, has demonstrated a compound annual growth rate of 79% from 2011 to 2016, and is projected to grow an additional 70% in 2017 reaching $6 billion in revenue.

While personal marketplace loan growth retracted in 2016 after several years of exponential growth, and is expected to resume at a slower rate of growth in 2017, the nonbank small business loan sector continues apace as slack in the broader market for small business credit drives businesses to seek alternatives to bank loans.

### Business Credit Sought Through Nonbank Online Lenders

  - 2016: 10%

Serving Small Business Financial Needs Goes Beyond Credit Access

While credit access remains an important focus area for providers who serve small businesses, it represents only a piece of the full picture of small business financial health. Broader opportunity exists to address the full range of small business financial stressors and needs, such as limited time for financial management, cash flow volatility, and barriers to startup funding.

**Elements of Small Business Financial Health**

Businesses are financially healthy when they...

1. Meet obligations (bills, taxes, payroll) on time and in full
2. Maximize collectability of sales
3. Have a financial management system and budget
4. Have access to funds to weather financial shocks
5. Have a sustainable debt load
6. Generate earnings to cover expenses and replace assets
7. Have appropriate insurance and risk mitigation plans
8. Have access to capital sufficient to pursue opportunities
9. Have a business plan that includes cash flow cycle, future expenses, and investment opportunities

**Typical small businesses begin with $40K in self funding.**

**Half of all small businesses hold a cash buffer of less than one month.**

**46% Entrepreneurs who use financial management software.**

**36% Small businesses that struggle to meet basic operating expenses.**
FinTech Solutions Make Inroads: New Channels Beyond the Storefront
Digital Domestic Wire Transfer Rises Rapidly and Begins to Scale in Remittance Market

The advent of website and mobile digital transfers have driven domestic wire transfer growth while use of storefront services to conduct cash transfers of funds declines rapidly.

Electronic wire transfer technology has likewise begun to change the way people send and receive funds via remittances.

6% - 9% of funds remitted from the U.S. in 2016 were sent abroad through digital channels.

Use of electronic technologies has made strong inroads in the tax preparation industry as consumers increasingly prefer to self-prepare and file taxes online, often at significantly lower expense than those who employ paid preparers at storefronts.

- **2009**: 30% Self Prepared, 70% Used Paid Preparer
- **2010**: 33% Self Prepared, 67% Used Paid Preparer
- **2011**: 35% Self Prepared, 65% Used Paid Preparer
- **2012**: 38% Self Prepared, 62% Used Paid Preparer
- **2013**: 40% Self Prepared, 60% Used Paid Preparer
- **2014**: 42% Self Prepared, 58% Used Paid Preparer
- **2015**: 43% Self Prepared, 57% Used Paid Preparer
- **2016**: 45% Self Prepared, 55% Used Paid Preparer
- **2017**: 47% Self Prepared, 53% Used Paid Preparer

94% of EITC Claimants e-filed in 2016.

6% submitted paper tax returns.

Online Sales Increase Market Share for Short-Term Credit Products

Short-Term Credit products are primed for online channel growth that can enhance borrower control in the loan comparison and application process.

While Installment Loans have been scaling online loan provision for some time, newer developments in technology have allowed products that rely on collateral or physical transactions to migrate to online channels. Even some Auto Title lenders, which require vehicle and title verification, have begun to experiment with remote handling of the initial application process.

The shift in Rent to Own agreements clearly demonstrates this trend. This product was previously offered almost exclusively by storefront operators but increasingly is sold through online e-commerce companies. There were an estimated 30,000 e-commerce Rent to Own stores in 2016, up from just 13,000 two years prior.

Rent to Own Sales Revenue

Source: The Shape of Rent-to-Own by the Numbers, RTOHQ.com, 2017

The compound annual growth rate of online Rent to Own sales from 2014 to 2016 is 27.1%.

Market Size Analysis Methodology and Data

Market sizing analysis is an exercise of best estimation for a quantity that is frequently unknowable or has a range of recognized figures. This analysis relies on sources that are credible, consistent with other estimates, and continuous, providing historic figures for reference. In many cases, figures are extrapolated from a selection of data sources to arrive at a final estimate for a given product segment. Sources and key figures are summarized in the Appendix below, and we transparently disclose our level of confidence—high, medium, or low—in the accuracy of each product segment, based on the Confidence Level Criteria at right. We encourage readers with access to further information to share sources or figures that can continuously improve our analysis.

All revenue generated by consumer spending is sized in this report for products that constitute alternative financial services typically used by underserved consumers. For product segments in this report that are used more widely across the consumer market, only the portion of revenue generated by underserved consumers or by subprime rate product offerings are sized. Savings and Checking accounts, Overdraft, and Tax Preparation services, as well as prime rate Auto Lease, Auto Loan, and Credit Card products all generate revenue in this wider market, so spending on these products by consumers who have prime rates or are fully served is not included in this report.

Consumer usage volume refers to dollars borrowed, transacted, saved, or managed through the use of a financial service, exclusive of fees and interest paid to access these products and services. Measurements of volume vary depending on product category. Single Payment Credit products, Title Loans, and Rent to Own are sized according to annual dollars borrowed to reflect the usage of products often extended multiple times during one year; the other Short-Term Credit products and all Long-Term Credit products are sized by average outstanding volume to reflect loans paid in installments or on a revolving basis and balances carried over a longer period; Payments products are sized by annual load or transaction volume; Deposit Account products are sized by average annual balances held in accounts; and the volumes of other financial services, which often generate revenue and fees independent of volume, are sized according to the volume of funds addressed by the service.

| ALL SINGLE PAYMENT CREDIT PRODUCTS | -3.0% | 39.4 | 39.3 | -4.3% | 88.6 | 86.9 |

* This report only sizes overdraft activity and spending by account holders who exhibit high frequency of usage—more than 10 times in one year—indicating that their need for short-term credit is chronically underserved.

** The volume and revenue sized for payday and pawn loans are counted per each discrete loan. Ratios of volume to revenue dollars do not reflect aggregate costs paid by borrowers who enter a cycle of debt, commonly referred to as rolling over, stemming from one initial single payment loan.

Appendix: Annual Growth Projections for All Products

Projected Revenue Growth 2016 to 2017 (estimate)
New Additions and Changes to 2017 Market Sizing

Each annual Market Size Study reflects the evolving array of products and product usage behaviors that impact the financially underserved marketplace. To ensure that changes in methodology and product inclusion or exclusion do not influence the measurement of growth rates, these changes are retroactively applied to the sizing of products for the complete data set from 2010 to present.

All year-over-year growth rates reflect revised figures for past years to ensure that annual changes are directly comparable. For reference, the chart below displays the market size identified at the time of publication for previous reports in this annual series and the size of the market for the same year sized according to current methodology.

Note: Previously published reports reflected a smaller collection of products, differences in the scope of consumers defined as underserved, and previous information available to inform methodologies and calculations. For more information on past methodologies, please consult the previous Underserved Market Sizing Study reports in this series.
New Additions and Changes to 2017 Market Sizing

New Product Additions

Retail Credit Card: Joining Subprime Credit Cards and Secured Credit Cards, this new addition sizes spending by consumers on credit cards offered through retail points of sale and other stores. These credit cards are typically available to consumers with scores in the 600s range, and typically feature higher rates and lower limits than prime rate credit cards, increasing the changes that those who carry a balance will pay higher rates and utilize a greater proportion of their credit limit. Consumers who are underserved by appropriate credit access may rely on such cards to finance large purchases or otherwise carry balances they cannot repay quickly.

In-Person Domestic Money Transfer: This product allows consumers to send funds from one point of sale to another for retrieval by another individual within the domestic United States. Much like Remittance, Domestic Money Transfers tend to assess fees, either flat or scaled to the size of the transfer, and are particularly costly when conducted in-person, an option which may be the only available choice for consumers who are cash-based and lack access to electronic forms of money management.

Changes to Included Products

Nonbank Small Business Loan: This product constitutes a change in terminology from the previous Small Business Marketplace Loan, intended to better capture the full range of small business lending products offered by both Marketplace and other nonbank lenders which typically are more highly accessible and differ in range of loan size, interest rate, and approval process from bank loans.

Products no Longer Included

Small Business Microloan: Included for the first time in last year’s report, this product sized spending by small businesses operating with revenues of less than $100,000 in low-to-moderate income census tracts, yet in a strong enough position to garner a traditional bank loan. Small business loans approved by banks and credit unions typically require a prime credit score and other rigorous demonstrations of business operations metrics. Therefore, we have determined that inclusion of this product, even for smaller loans in lower income areas, does not clearly fit the focus of this report, which aims to document the spending of those who are financially underserved.
New Additions and Changes to 2017 Market Sizing

Changes in Product Methodologies

**Pawn:** Pawn revenue is now calculated to include both the direct revenue based on loan fees and interest as previously sized, and the monetary value of pawned items forfeited (items forfeited valued only at level funded through original loan, a more conservative estimate than resale value). Volume estimate methodology remains unchanged.

**Secured Credit Card:** Secured card volume and revenue, previously calculated based on industry expert estimates of volume and advertised pricing and terms of leading providers is now enhanced with direct data on number of accounts, card balances, monthly and annual fee incidence, and monthly and annual fee value provided by the Federal Reserve as well as annual percentage rates advertised by leading providers.

**Private Student Loan:** Revenue estimates now derive directly from interest rate yield reported by leading providers, rather than relying on average interest rates across the industry and the proportion of loan balances in active repayment only, a previous methodology which did not account for average interest rates which not hold constant across loans in active and inactive repayment.

**Marketplace Loan (Personal):** Revenue estimates now derived from leading provider data that includes origination vintage and monthly interest paid on loan balances for each origination cohort, rather than previous methodology which relied on interest paid on quarterly aggregates of loan balances for all vintages.
Thank You
