**Healthy**

Your healthy range is in the green zone.

**Unhealthy**

When you are not doing so well, your metrics are outside the green zone, either too high or too low.

**What is hGraph?**

hGraph provides a holistic view of your health. Based on an individual's health data, it identifies where an individual's health numbers are, and where they should be.

hGraph is patient-focused with professional clinical relevance.

**Your Health Score**

A single aggregated number ranging from 1-100 that represents your health status.

Are you passing or failing?

**Target Ranges**

Each metric has its own scale and healthy range.

Your healthy range is most influenced by your age and gender.

**Metrics**

Each top-level indicator on hGraph is an aggregate of many metrics.

Some metrics have a larger impact on your health score.

These top-level indicators on hGraph are created by clinicians and health care professionals – further calibration is required.

**Patterns**

Identify conditions or pre-conditions based on a common shape.

**Rendering Datasets: Low Floor, High Ceiling**

hGraph can accommodate varying amounts of personal health data, from a walk-in clinic visit data to your lifelong health history.

**Vaccinations**

- Hepatitis B: 31 Dec. 2011
- Diphtheria: 6 Jul. 2006
