ENGINEERING MEMO. #106

TO: Memo Distribution
FROM: R. G. Fuller
SUBJECT: AEROBUS REAR WHEEL BRAKE CHANGE
WHEEL CYLINDER SIZE 1-1/8" TO 1"

Tests, recently made, show that the subject brake assembly should be fitted with a smaller cylinder. We are changing the drawing; and requesting that as many sets as can be reached be modified accordingly. The chassis numbers of vehicles that are delivered before the wheel cylinders are changed must be forwarded to Engineering Records.

The change should be made in sets of two, a right and a left. If the wheel cylinders are not the same size on both sides of any vehicle; serious difficulties will result.

The removed cylinders shall be carefully packed for return to Bendix Corporation. The shipment, by the vendor, this date, of one hundred pairs of cylinders is reported.
