SUBJECT: Exhaust System Revisions

To reduce the back pressure in the exhaust system the tailpipe diameter will be increased from 1-3/4" to 2". Interchangeability of mufflers & tailpipes are not affected in that the new tailpipes will be installed outside the muffler outlet rather than inside. A new clamp (701431) will be required for new tailpipes. Parts affected are outlined in "A" below. This revision should be incorporated on cars with V-8 engine as soon as possible and six cylinder cars when old stock is depleted.

In addition to the above revision the two piece exhaust pipe extension and one support will be replaced by a one piece extension. This change will be made when stock on hand has been depleted. Service of old can be made with new one piece extension. Parts affected are outlined in "B" below.
