ENGINEERING MEMO #430

TO: Memo Distribution  
FROM: R. E. Orwig  
SUBJECT: HIGH OUTPUT GENERATOR (ALTERNATOR) RUNNING CHANGE FOR 1981 -  
ALL MODELS.  
EFFECTIVE WITH CHASSIS NO. 801862

As a product improvement to increase the generator electrical output, especially at engine idle, we are releasing a new 70 AMP DELCOTRON GENERATOR to be used across the board for ALL Checker production engines and installation variables. The amperage output will be increased by approximately 40 - 50 percent - at engine idle - over our present 63 AMP DELCOTRON GENERATOR. This change will greatly improve the battery life due to the high electrical output at idle.

Following is a complete list of parts affected by this running change:
