Traction control—Low-speed _____	—	—	S	S

(a) Certified to federal regulations that allow less forceful air bags. Always use seat belts.

Remember, a backseat is the safest place for children.

(b) Certified to the federal regulation for automatic passenger occupant classification. Always use seat belts. Children 12 and under should always be in a backseat correctly using an infant or child restraint system, or seat belt positioned correctly for the child's age and size.

(c) The OCS determines the conditions for activation or deactivation of the passenger-side front airbag based upon the weight of the occupant. It may not activate the air bag if the occupant has incorrect seating posture or is moving in the seat. You should observe the air bag light to determine if the OCS is deciding properly. Passengers should sit properly in the seat with the seat belt fastened at all times.

(d) Always sit properly in the seat with the seat belt fastened. Always observe the passenger air bag indicator lamp to determine if the OCS classification is appropriate. Children 12 and under should always be in a back seat correctly using an infant or child restraint system or the seat belt positioned correctly for the child's age and weight.
