

Freckle is the first and only Differentiation Platform

Freckle is a supplemental resource that makes differentiation a reality for more than 500,000 teachers in over 10,000 districts.

Differentiate *what* students learn

With Freckle, students are engaged at their instructional level with topics that interest them.

For example:

- Students are placed on their own adaptive learning pathway in Math.
- Hundreds of non-fiction articles are available at every student's reading level.
- Literacy-based Social Studies and Science units allow students to access concepts at *their* level.

Differentiate *how* students learn

Freckle provides a wide variety of resources to target different learning styles and readiness levels.

For example:

- Students can practice independently on a computer or tablet while also receiving support from instructional videos and a built-in peer tutoring component.
- Students participate in our innovative, real-world Inquiry Based Lessons, Constructed Response Prompts, and Design-Engineering Challenges.

Assess students in real time (not just 2-3 times per year)

Teachers and administrators can monitor progress at the individual, class, school, and district levels.

Freckle's reports make it easy for teachers to pinpoint where students' gaps are and where they're ready for enrichment, extension or intervention.

Cross-curricular

Unlike adaptive programs that only offer practice in one subject, Freckle's Differentiation Platform is a one-stop shop for Math, ELA, Social Studies, and Science. Plus, all of our cross-curricular units are literacy based so students can build their knowledge through reading and writing.

Engaging and relevant content

All content is written by Freckle's Curriculum Design team, which is composed entirely of former educators. Freckle is committed to rigor and quality in all released content; therefore, lessons are reviewed by two curriculum experts before publication.

What sets a Differentiation Platform apart?

In today's increasingly diverse, complex, and connected world, a one-size-fits-all approach to education doesn't meet the needs of students. To prepare each learner for academic success, educators need to take into account students' unique differences in readiness level, learning style, background, and interests.

Freckle makes this possible by differentiating Math, ELA, Social Studies, and Science content so that teachers can reach every student at their own level and provide them with the world-class education they deserve.

Table 1: A comparison of textbooks, adaptive programs, and Freckle's Differentiation Platform

	Textbooks	Adaptive Programs	Freckle's Differentiation Platform
Differentiate <i>what</i> students learn	The same textbook for every student	Yes	Yes
Differentiate <i>how</i> students learn	The same textbook for every student	Only provide independent practice	Yes
Assess students in real time	Occasional formative and summative assessments	Yes	Yes
Cross-curricular	One subject per textbook	Often 1-2 subjects per program	Yes
Engaging and relevant content	Sometimes	Often skill and drill	Yes

Want to bring differentiation to your school or district?

While individual teachers can differentiate instruction in their own classrooms, it's most effective when whole buildings (or districts!) are on the same page with differentiation. If you'd like to discuss bringing Freckle's Differentiation Platform to your educators and students, schedule time to chat with us here:
