

A COMPLETE SYSTEM

The AI-Native EMR for Home Health. From referral to reimbursement, with less paperwork at every step.

AutoMynd prepares the work throughout the episode. Your clinicians and staff remain in control of every decision.

AI Referral Intake

Automated reviews, clinical insights, eligibility & more.

Autonomous Scheduling

By skill, availability and drive time

Ambient AI for Clinical Documentation

Visit note drafted during the visit

AI Assisted QA & Coding

PDGM optimized reviews

Built-in Clearinghouse AI enabled RCM

NOA, Pre-bill, PCR on Autopilot

QAPI & Custom Reporting

HHCAHPS, Quality Reporting

Built with RCD requirements, making PCRs and ADRs easier to manage.

The ROI You Can Expect

Time Saved

per Visit Note
Drafted during the visit, submitted the same day.

Faster Review

per Referral
Read, verify, and automatically built patient profile.

Audited Charts

on Day 3, Not Day 33
Packet gaps are identified as soon as documentation is submitted.

Patient Engagement

Patients report stronger engagement and connection with their clinicians.

AUTOMATED PRE-CLAIM REVIEW

- ✓ Signed 485 on file
- ✓ OASIS accepted
- ✓ Valid face-to-face
- ✓ Interim orders signed
- ✓ Notes match claim
- ✓ Packet ready

Verified during the active episode, with missing items routed to the appropriate team member in real-time.

Come by Presidio B for the live demo.

Take a look at the patient and provider journey in **AutoMynd**.

● Referral	AutoMynd AI reviews the referral , checks eligibility, validates the face-to-face and homebound status, and proposes the plan of care, completing the review in a few minutes.
● Scheduling	Clinician visits are scheduled automatically based on continuity of care, required skills, proximity, and authorized visits. Patients and families can track visits on patient facing application..
● Ambient AI charting	Ambient AI drafts the OASIS and the visit note automatically from the conversation in the home, while giving the clinician real-time clinical scrubbing capability.
● QA and Coding	AI scrubs the chart and flags discrepancies for oasis, plan-of-care alignment, and homebound support, with coding recommendations for the coder to confirm.
● ADR readiness	Every chart goes through a real-time ADR readiness check to ensure it meets CMS compliance standards to ensure defensibility.
● Pre-claim review	Automated pre-claim review , with a downloadable packet ready to upload to your MAC portal.
● Billing and clearinghouse	Built-in, API-based clearinghouse integration. No waiting to check an NOA and no leaving the EMR to submit claims. ERAs post back automatically, and AI denial management works the rejections.
● Patient360	Patient360 keeps patients and families connected throughout the care journey. They can view upcoming visits, receive clinician arrival and medication reminders, and access care information directly from their phones.

Transitioning without disruption. We have a **playbook for that.**

We handle data migration, configuration, and training to protect patient care and cash flow throughout the transition.

Payer Setup

Payer setup is configured to support accurate billing.

Workflow Configuration

Configured around your agency's clinical and operational workflow.

Data Migration

Patient, employee, payer, and operational data moves with you.

Training and Go-Live

Role-based training and hands-on support through launch.

Built with people who led **home health operations.**

Our founding team previously worked at BAYADA, Amedisys, LHC and other leading agencies. Every workflow was reviewed by home health clinicians, coders, and billers before release.

Security and Compliance

HIPAA and SOC II compliant, BAA with every customer.

In Production since 2023

Full EMR released 2026.

Connected Ecosystem

Inovalon, Waystar, Stedi, and eFax, with open APIs available.

Human Oversight

AI moves the work forward. Your team stays in control.
