## LED LIGHTING SYSTEM

- Long lasting bright commercial grade LED lights are recessed for full protection.
- Molded wire harness runs through the frame for total protection

## SIDE PANEL

The 7" tall side extrusion ties the trailer cross members together and fully supports the plywood edge. Side panels also work great as tie-down points.

## PLUG STORAGE RECEPTACLE

Keeps plug safe, dry and corrosion free.

## RUBBER TORSION AXLE & HUB SYSTEM

The torsion system is a true independent suspension system which provides a smoother ride as compared to a spring axle. The long lasting hub system is designed for no maintenance for 6 years.

## PROTECTIVE REAR BUMPER PATENTED

Angled bumper not only protects the plywood decking, it makes for easier loading and unloading with carbide wear rods.
