

Welcome to OpiSafe

OpiSafe is a **FREE** web/mobile app that helps you safely follow your prescribed opioid pain treatment and have better outcomes.

Opioids are powerful medications that relieve pain by lessening pain signals to the brain. Commonly prescribed opioids are hydrocodone (Vicodin or Norco), oxycodone (OxyContin, Percocet), morphine (Kadian, Avinza), codeine and other similar drugs.

The image shows a smartphone displaying the OpiSafe app interface. At the top, the status bar shows 'Carrier' with a Wi-Fi icon and the time '4:08 PM'. The app header is teal with the 'OpiSafe' logo. Below the header, there are two performance metrics: '90% Required Task Compliance' and '35% Current Task Compliance'. A list of assessment tools follows, each with a description and a green 'Go' button:

- Brief Pain Inventory (BPI)**: Assessment that assesses current pain. [Go](#)
- Patient Health Questionnaire 9 (PHQ-9)**: A personal health questionnaire to assess current health condition. [Go](#)
- Generalized Anxiety Disorder 7-item (GAD-7)**: A seven question assessment that measures anxiety and stress. [Go](#)

An orange circular callout on the right side of the phone contains a download icon (a cloud with a downward arrow) and the text 'opisafe.com/download'.

Your Pain Management Agreement

As part of your prescription pain treatment, your provider will ask you to sign a pain management agreement to simplify care, improve communication and treatment. You may be required to complete certain responsibilities in addition to interacting with OpiSafe, like only going to one prescriber for pain medication, agreeing to keep your pain medications in a safe place and keeping scheduled appointments, etc.

Tracking Your Health

Your care provider will use OpiSafe to help track your health in a few different ways between visits using a web or mobile app (or a combination of both). Your prescriber has already enrolled you in OpiSafe, so look for an email or text to sign up for the free program.

Once you sign up, you will receive notifications on your iPhone or Android (no text fees) or emails if you use the web version. Those notifications will include certain tasks to complete:

- **Essential Health Assessments** – clinical assessments that help your doctor provide the best care for you. We may ask you to rate your pain or describe what activities you are able or unable to do because of your pain. Your provider will determine what and how many assessments you will be required to complete as part of your pain management agreement.
- **Satisfaction Surveys** – quick surveys that are designed to determine how well your prescriptions are working, any side effects, etc.

Your privacy is very important to us.

OpiSafe is HIPAA compliant and secure and we will never share your personal health information with others.
