The Feith Engineering Team at FACT/2015's JAD Session

New Customer Events & FACT

We'll start with exciting news about **FACT, the Feith Annual User Conference & Training**. For 2016, we will be taking a "gap year" from FACT, meaning we're taking a year off from holding our User Conference in order to present three brand-new Feith Customer Events just for you, our Feith family. This year, we're giving you two awesome free virtual events and a great new Washington DC "Meetup" just for our Federal Government customers.

Please Note: Due to new federal regulations, some emails to government offices may have live links & URLs removed or altered. If links in this email do not work, please visit feith.com/events (feith [dot] com [slash] events) for info and registration.

New Virtual Event | **Feith Virtual Demo-Go-Round (DGR)**

- **Date:** Morning of Tuesday May 10 & Afternoon of Wednesday May 11
- **Where:** Online
- **Cost:** Free for all Feith customers

Feith Virtual Demo-Go-Round - based on a favorite event at the Feith User Conference - is an informational online software and solution **discussion and demonstration event** where you'll experience the latest Feith innovations. It

will consist of eight live, interactive, real-time and concurrent online demonstration 'stations', each featuring an important Feith solution, presented **live on your computer screen** by the very software developers that helped create the program.

Throughout the event, it's your choice of what you want to see. Seen enough of one station? Pop out and into another. Want to see more? Come back later. All stations will run live simultaneously over the course of Tuesday morning and again Wednesday afternoon, with live demos re-starting at regular intervals during the day. Details of what topics will be presented at each station is coming soon. Keep an eye on your inbox!

New Virtual Event | **Feith Virtual JAD (Joint Application Development)**

- *Date:* Thursday August 4
- *Where:* Online
- *Cost:* Free for all Feith customers

Feith Virtual JAD: Joint Application Development, another User Conference favorite, is a group discussion. It's your opportunity to give us your suggestions, your ideas, and your improvements about our software - as well as discuss and solve your most sticky issues - and just tell us what you think your Feith should be more able to do for you... directly to the Engineers, Developers, and Programmers that can make it happen.

It's simple. *You:* In the virtual audience, ready with questions, comments, and suggestions. *Us:* Our full Feith Engineering staff (plus other key Feith), listening to you. Moderated by President Don Feith, we'll take your requests one by one and present them to our panel to either solve on the spot or add to our list of suggested features, adjustments, and shortcuts. After JAD has ended, we'll write up all your suggestions and put them back to you to vote for your Top Ten best ideas, which will then guide our development schedule for the next year, incorporating the best and most useful ideas from your recommendations into the next versions of Feith.

New In-Person Event | **Feith Federal Symposium**

- *Date:* Tuesday June 21 & Wednesday June 22
- *Where:* AC Hotel, National Harbor MD
- *Cost:* \$299 per person
 - Includes one free registration with every paid registration
 - Federal government customers only please

The Feith Federal Symposium is a new two-day event for Federal customers. It will feature speakers from Feith and our user community, presentations on topics aimed to maximize your Feith software, demonstrations of the newest advances in our solutions and the how they fit into your future, opportunities to learn more about critical industry issues, a peek at upcoming releases and products, and a chance to discuss your challenges with us, as well as network with fellow Federal customers.

FFS is a targeted User Conference just for you, our Government colleagues, with all your favorite Feith FACT sessions presented from a specifically Federal viewpoint. Two breakfasts, two lunches, and an evening social event are included. And since all attendees are from Federal Government agencies, you can feel safe to discuss questions and issues arising from even your most secure and confidential environments.

New Product Release Versions

New Version | Forms iQ Designer 9.2.4.1

Forms iQ is just one of many products we offer that started life as an application we had used internally which became so useful we had to offer it to you. Forms iQ has come a long way over the years becoming not only a powerful Forms Creation tool for both internal and customer-facing information-gathering, but as an engine for all manner of development. This latest and greatest upgrade to Forms iQ incorporates several of your JAD requests for it spanning the last few User Conferences. Highlights include:

- A new "Body HTML" tab which enables you to edit the form's HTML right inside the Designer
- Syntax highlighting and line numbering in a variety of fields, such as your *Autofill SQL*
- A brand-new Forms iQ Server version (9.2.4.1) to go with the new Forms iQ Designer
- [View Release Notes](#)

New Version | Dashboard iQ Designer 9.2.6.1 | Dashboard iQ Server 9.2.1.1.5

Dashboard iQ is certainly Feith's most powerful management tool, giving organizations a real-time view of critical data to make critical decisions, and a deep dive into the data with level-by-level drill downs, all the way to the raw data. What's been missing is an even greater ability to make new and more powerful dashboards in a snap. Now, the new Dashboard iQ Designer is even easier to use. In Designer, now you can:

- Create new Dashboards and add Pods even more simply, now with just a few clicks
- Use "Color Rules" to make particular values display in specific colors, such as setting documents tagged as "secret" to always display in **red**
- Use new "GeoMap Pods" to display your data on a convenient and visual geographical map
- [View Designer Release Notes](#) | [View Server Release Notes](#)

New Version | New & Improved Feith User Group

Did you know the Feith website hosts a convenient and active Feith User Group, with a wealth of information about every piece of software and notes on every release at your fingertips? Well now you do, and it's the best time to start utilizing this treasure trove, as we've finished renovating the site so recently, the paint's still wet. We've made a bunch of improvements so now it is even easier to find what you're looking for, such as our latest documentation and release notes, detailed progress on your most-desired JAD requests, and more.

FEITH · USER GROUP

- Go to feith.com/usergroup, or click ""Resources"→"Usergroup" from **our website's** top navigation menu.
- Login with the same username and password you've always used to access the Feith User Group
 - Don't have or don't know your login? [Email us](#) or give us a call at 215.646.8000 and we'll set you up.
- *Even faster!* Want to be notified about new software, releases, versions, and documentation as soon as they're released? Subscribe to our RSS feed by plugging feith.com/usergroup/feed into your RSS reader.
- This newsletter (and all future editions of FeithCONNECT) is also available in the User Group, so feel free to share it among co-workers and colleagues here: feith.com/usergroup/feithconnect-march-2016

Upcoming New Products & Development Sneak Peek

Product Spotlight | FeithDrive

FeithDrive is Feith's dynamic file sharing, file sync, collaboration, and remote access tool that lets you sync your files from every device and drive securely, and safely access or share the information from and to anywhere, based on your permissions. FeithDrive is your Private Cloud, secured behind our firewall and seamlessly integrated with your existing Feith software.

- Replace non-secure file sharing habits in your organization, such as emailing large documents as attachments, passing around a USB flash drive, or utilizing Public Cloud options such as Google Drive and DropBox.
- Drag and drop files into the FeithDrive web app, organize them into folders, and mark your favorites.
- Find your files easily with Full Text Search, locating files by their text, metadata, or OCR'd content.
- Share files with others, make notes, collaborate with colleagues, and see what files have been recently updated under the Recent folder.

Upcoming Product | FeithDrive Plugin

In addition to all the great things FeithDrive already does, to make working with documents stored in FeithDrive even easier and more seamlessly, now we've created a new Plugin so you can edit files directly in FeithDrive with just a couple clicks. Here's all you'll have to do (so easy!):

- Right-click on a file in FeithDrive and choose "Edit". The file will open up right in its proper native program on your desktop or mobile device.
- Then, just make changes and save as usual. The plugin sees your changes and sends them back to FeithDrive as a new revision.
- For example, use FeithDrive to share a document in need of approvals. The approvers can just open the document directly from FeithDrive (which will direct the document to open natively in Adobe Reader or MS Word), add their signatures, and save. The Plugin will save it right back into FeithDrive as a revised doc, synced across anywhere from which you'd access it. Done!

Upcoming Product | Elasticsearch Full Text Search

If you don't know, Elasticsearch is a full-text search engine with an HTTP web interface and JSON documents, developed in Java and released as open source. It's also the most popular, flexible, and adaptable enterprise search engine in use today, which is why Feith is now running its full text search with it.

- Feith's new Elasticsearch engine is open source and written in Java, providing a RESTful web interface and custom schema JSON documents.
- Full text search is now significantly faster, using a brand new version of the Feith Text Retrieval Engine.
- We've also added this superfast speed to Dashboard iQ as well: Your data in Dashboards will be noticeably *fast fast fast*, giving you the near-real-time view you need to keep work flying & your organization humming.

Development Sneak Peek | Auto-Categorizer

As more and more records - such as email - need managing, manual categorizing for Records Management isn't just slow, it's pretty close to impossible. In the 21st century, RMA not only needs to be automated but fast. Coming down the line from Feith is a brand new Auto-Categorizer, or *AutoCat*, that will categorize your documents at blazing speeds using Boolean rules, like Google does.

But if you want to go even deeper using more complex Bayesian analyses, Feith offers Analyze iQ as an alternative. Analyze iQ isn't quite the sprinter AutoCat is, but it can be easily trained to intelligently categorize documents... more like a decathlete, not as fast, but more well-rounded.

AutoCat and Analyze iQ together are all you need for automated, fast categorization for records management.

Tips & Tricks, New Documentation, and More!

Did You Know?

In the new **Dashboard iQ Designer**, you can customize the Title Bar text of a Child Pod and include both X_VAL and Z_VAL tokens. When your users drill down, your title bar will clearly communicate what data they are viewing!

Want more cool hints and shortcuts? Check out the "Tips and Tricks" sections of all Feith documentation.

New Documentation

We have a bunch of new Documentations for you deep divers, available in the new & improved **Feith User Group**:

- Dashboard iQ Designer 9.2.6.1
- Dashboard iQ Server 9.2.1.1.5
- Feith Control Panel 9.2.2.6
- Forms iQ Designer 9.2.4.1
- Forms iQ Server 9.2.4.1
- Print to FDD 9.2.2.1
- Raptor 9.2.1.5
- Vortex 5.9
- Barcode Maker 2
- EDStor 1.51
