

OnBase + Viewpoint = a Better AP Process

Requordit integrates OnBase's premier document management solutions with Viewpoint, and a variety of enterprise resource planning (ERP) systems, to increase the productivity of your workforce and boost your bottom line.

Why Integrate With OnBase?

ERPs aren't built to serve the needs of every organization or accounts payable department. This causes a multitude of functionality gaps including: lack of visibility into documents, incomplete purchase orders, late-payment fees and high shipping costs. Discover the benefits of a Viewpoint-OnBase integration below.

Bringing Clarity to Unstructured Content

OnBase archives and organizes data and documents before it enters your system of record.

Removing the Guesswork from Your P2P Process

No more hunting down stakeholders for missing invoice fields. Our Viewpoint integration automatically alerts individuals of missing information.

Providing Quality Mobile Access

Whether it's in the field on a smart phone or in a meeting on a tablet, project managers can send requisition forms in just a few clicks.

Integration Specs

- Direct API to API integration with Viewpoint for attached documents.
- Pulls company, vendor, job and coding information directly from Viewpoint via database queries for PO and non-PO based invoice processing in OnBase.
- OnBase passes information to Viewpoint via the standard invoice-upload template process.
- Documents in OnBase can be retrieved in Viewpoint via direct attachments or preconfigured queries to OnBase.

About Requordit

Our team of OnBase experts, experienced developers, business analysts and project managers provide best-in-class process optimization services to propel your organization forward.
