October 31, 2017

The Honorable Pat Roberts  
Chairman  
Senate Agriculture, Nutrition, and Forestry Committee  
United States Senate  
Washington, DC 20510

The Honorable Debbie Stabenow  
Ranking Member  
Senate Agriculture, Nutrition, and Forestry Committee  
United States Senate  
Washington, DC 20510

Dear Chairman Roberts and Ranking Member Stabenow:

As scientists and researchers, we write to express our opposition to the nomination of Sam Clovis to serve as the Under Secretary for the Research, Education, and Economics (REE) Mission Area at the United States Department of Agriculture (USDA), a position which also encompasses the role of USDA chief scientist. We expect that when your committee evaluates Clovis’ record and qualifications, you will similarly conclude that he is unfit for this position.

The nomination of Clovis for USDA chief scientist reflects a lowering of the high standards that America’s farmers, ranchers, consumers, researchers and universities expect from a leader of scientific inquiry and public investment in science. Congress emphasized the unique nature of the REE Under Secretary position by codifying through the 2008 Farm Bill that the nominee must come “from among distinguished scientists with specialized training or significant experience in agricultural research, education, and economics” (7 U.S.C. 6971). These rigorous standards are fitting given the Under Secretary’s control of an approximately $3 billion annual investment in research and education grants, representation of the US government in international agricultural science discussions, and oversight of scientific priorities and integrity at the department.

In every aspect, Clovis falls far short of the standards demanded by the position. While he holds a Doctorate of Public Administration, his professional background is completely devoid of relevant scientific experience that would otherwise equip him to fulfill his duties. The breadth of scientific literature that underpins the operation of our food and farm system is wide-ranging and complex. The USDA chief scientist must have a strong scientific background in order to oversee the department’s work in conducting research; administering scientific programs; and making crucial decisions on food safety, agricultural productivity, and emerging threats to public health. An individual without grounding in the scientific process is ill-suited to make informed, objective, and strategic investments for the future of American agriculture.

Given Clovis’ lack of training and experience, it is reasonable to analyze what little we do know about him and his concerning and illogical statements. His past denial of the scientific consensus on climate change and ill-conceived and offensive racial comments reveal an individual unfit to oversee the responsible and impartial investment of billions of taxpayer dollars into the development of an equitable, safe, and productive food and farm system.

Clovis’ nomination is an abandonment of our nation’s commitment to scientifically-informed governance and stands in opposition to the best interest of America’s farmers, ranchers, consumers, researchers and universities. We urge you to reject the nomination.

Sincerely,
Affiliations are listed for identification purposes only.
