

Transportation Data Center
Data Set Codebook

NUMBER 97-8

NOVEMBER 1997

The University of Michigan
Transportation Research Institute

STATE OF WASHINGTON
1996 MOTOR VEHICLE TRAFFIC ACCIDENTS

INTRODUCTION

This code book documents data sets describing motor vehicle accidents that occurred in the State of Washington during calendar year 1996. The data sets were developed by the Transportation Data Center at the University of Michigan's Transportation Research Institute (UMTRI) from data supplied by the Washington State Patrol. The cooperation of that agency is gratefully acknowledged.

The original data have been formatted into a relational master file composed of five distinct record types (i.e., Accident, Vehicle, Driver, Passenger, and Pedestrian). In order to provide rectangular files that are acceptable to ADAAS and most major data analysis packages, five system data sets were constructed from the master file. A relational data set containing the five record types with extensions made by the Data Center is maintained, however, and other final data set configurations can be generated. The characteristics of the system data sets are as follows:

1996 WASHINGTON DATA SETS

CATEGORY	KEY	VARIABLES	CASES
Accident	WAC96ACC	1-54	140,215
Occupant	WAC96OCC	1-54, 101-157, 201-212	340,566
Pedestrian	WAC96PED	1-54, 101-157, 301-316	3,901
Two-Vehicle	WAC96TVA	1-54, 101-157, 201-212, 1101-1157, 1201-1212	97,171
Vehicle	WAC96VEH	1-54, 101-157	263,858

The letter "C" in the data set descriptor represents "CENSUS" since these data sets describe all motor vehicle accidents that

occurred in the state during calendar year 1996 that were recorded by the State Patrol. In the pedestrian data set (WAC96PED), the vehicle variables (v101 through v157) refer to the vehicle that was associated with the pedestrian or pedalcyclist in the accident.

The code book itself is divided into four sections that document the accident, vehicle, occupant, and pedestrian records, respectively. Univariate frequencies and frequency percentages displayed in each section were derived from the corresponding data set (i.e., accident frequencies from WAC96ACC, occupant frequencies from WAC96OCC, etc.). An index located at the end of the code book gives the variable number and code value where each word used in a variable name or code value definition may be located. Common words and connectives (e.g., the, and, but, while, etc.) are not included in the index.

The two-vehicle-accident data set contains one record for every accident that involved two vehicles. This record contains accident information as well as vehicle and driver/occupant information for each of the two involved vehicles. In order to avoid a large amount of duplication, the two-vehicle data set is not documented directly in this code book. Univariate frequencies are consequently not available. Variable numbers for this data set are defined as follows:

V1 - V54 - Accident
V101 - V157 - Vehicle #1
V201 - V212 - Occupant information for Driver 1
V1101 - V1157 - Vehicle #2
V1201 - V1212 - Occupant information for Driver 2

The code book may be used directly for the definition of variables V1 through V212. Variables V1101 through V1157 have the same definitions as V101 through V157 and variables V1201 through V1212 have the same definitions as V201 through V212.

While every effort has been made to provide accurate, reliable data, inconsistencies may arise from the source data or from the reformatting procedures used. Consequently, the Data Center cannot guarantee the accuracy of the data, but will try to resolve any discrepancies that are found. Please notify the Center of any errors or data inconsistencies that are uncovered as well as any suggestions or comments concerning the data or the code book by calling the Data Center at (313) 763-3230.

65547 46.7	9. Other location

Variable 21	ON OR OFF ROADWAY	Width: 1	Type: Numeric
		Dec: None	Miss: 9

For noncollision accidents, the location of the vehicle at the time of the accident determines whether the accident occurred on or off the roadway. For collision accidents, it is determined by the location of the accident, or the point of impact in relation to the boundaries of the roadway. When more than one injury or damage-producing event occurs, the accident is classified according to the location and nature of the first event.

1996 Prcnt	ON OR OFF ROADWAY

STATE OF WASHINGTON
1996 - Accident

Variable 32	VEHICLE MIX	Width: 2	Type: Numeric
		Dec: None	Miss: 88

Eight vehicle types, or groups, are defined in terms of the code values of Variable 102, VEHICLE TYPE. The groupings are recoded from Variable 102 in the following manner: (01)=1, (02)=2, (03-07)=3, (10-11)=4, (12)=5, (13,15)=6, (08,09,14)=7, (00,99)=8. Combinations of these values are then used to represent all possible collision mixes of the eight vehicle groups.

1996 Prcnt	VEHICLE MIX
31151 22.2	01. Single vehicle accident
11893 8.5	02. Three or more vehicle accident
