**Will We Actually Get A Place To Store Our Nuclear Waste?**

It certainly looks like it. The NRC accepted Holtec’s license application for its proposed centralized interim storage facility for spent nuclear fuel. To be located in NM, the facility would store spent nuclear fuel until a final disposal facility is built or until we build our new fast reactors that will burn it.

Manuel & Al,

Attached is an interesting article on the shipment of commercial spent fuel from the West Valley New York reprocessing facility to Idaho.

Manuel: for future CEP reading.

Al & Manuel,

Attached is part of a NRC response letter to Sen. Booker over questions he asked related to Oyster Creek’s closure and spent fuel storage. The questions and responses are good information to share with our CEP.

Just as an FYI for everyone, attached are responses the NRC has transmitted to Senator Booker (D-NJ) regarding several questions about the planned shutdown of Oyster Creek. Do not believe there is anything startling in here, either as relates to questions or responses, but typical of “baseline” inquiries from Congress to agency about plant closures.
