

DECOMMISSIONING SAN ONOFRE NUCLEAR GENERATING STATION (SONGS)

Southern California Edison (SCE) formally notified the Nuclear Regulatory Commission (NRC) on June 12, 2013, that it had permanently ceased operation of Units 2 and 3 on June 7, 2013. The notification set the stage for SCE to begin preparations for dismantling and decommissioning the plant.

Today, over 50% of the plant has been dismantled. While NRC regulations allow up to 60 years to complete decommissioning, SCE believes completing the current phase of dismantlement and decontamination work in a timely manner benefits our customers, the local communities, and the environment. This phase is expected to be completed around 2029.

EDUCATIONAL OPPORTUNITY FOR CAPO UNIFIED STUDENTS & TEACHERS

The team at SONGS provides STEM-focused presentations and tours. Tours are best suited for high school physics, environmental sciences, and chemistry classes.

All presentations include:

- Understanding radiation
- How the station generated power
- The decommissioning process
- What to expect in the coming years

Speakers include past and present SONGS employees who share their personal experiences during operation and dismantlement.

Contact us today to schedule a virtual or in-person presentation or on-site tour.
