

Rain Gardens for a Better Yard

This spring Cobb County Water System encourages you to consider a rain garden as an addition to your yard! A rain garden is a natural landscape in a low-lying area that receives rainwater from impervious surfaces (rooftops, driveways, and other hard surfaces). They prevent pollution, reduce stormwater runoff, and serve as shelter for wildlife. Join Cobb Water on Friday, April 26 for an enriching Lunch & Learn on Intro to Rain Gardens. You're also invited to join us for a tour or a hands-on work day at the Wildlife & Rain Garden located at 662 South Cobb Dr. Visit www.cobbstreams.org/events for more information.
