

Comfort during **Hot Summers** and **Long Winters**

Air-source heat pumps provide *both!*

Earn up to \$1,050 in rebates!

Unlike a traditional air conditioner, an air-source heat pump can both heat and cool your home, providing versatility, efficiency, cost savings and comfort. Pairing a heat pump with your existing natural gas or propane furnace is a smart way to manage your energy bills.

Ductless mini-split heat pumps are ideal for homes that are heated by a boiler or electric baseboards. Ductless heat pumps use small indoor units mounted near the ceiling or on the floor. You can still get comfort and efficiency without the ducts.
