

Raven Portable Pilot Unit

SHIP POWER The Professional Grade Solution

The integrated marine navigation solution from the manufacturer and proven leader of reliable, high-performance systems

Raven Bluetooth Pilot Interface

- 20+ hours of operation without charging the battery
 - Software shows operation hours remaining
- Automatically adapts to wrong AIS data baud rate
 - Software displays baud rate
- Automatically adapts to wiring errors
 - Software displays wiring errors
- Dimmable status LEDs can be dimmed from laptop for night operation

Raven Invicta 210LB DGPS

- Less than 1 meter RMS accuracy (3.2 feet) with beacon corrections
- Multi-path on a ship can diminish accuracy
 - Software warns when multi-path is affecting position
- Software reports GPS operational status, such as "antenna fault" and "high HDOP"
- Requires AC power and antenna must be set up outside with a good view of the sky
- Reliable and knowledgeable service and support staff

Raven Wheelhouse II Software

- Developed by Raven over the past 15 years with the help of ship pilots
- User-configurable layering of chart data (S57, channel centerlines, etc.)
- Online chart updates
- Manual or automatic intercept calculations
- Works with Raven Wheelhouse PDA on Apple iPhone or iPod Touch
