Tank Deployment Odd # of Panels

1. Determine whether the Liner or Pad has an odd or even number of panels. This should be indicated on the roll label. This instruction is for a Liner/Pad with an **odd number** of panels.
2. Position the roll outside of the perimeter with the start of the unroll equal to the wall height plus the overhang. Place the left edge, (while facing the center of the tank) 6 feet to the right of the tank center point.
3. Unroll the Liner/Pad with the marked edge lined up with the center of the tank. There is an "X" marked in the center of the liner that should line up with the center of the tank, 6 feet offset to the right of center.
4. Once the tarp is unrolled, unfold the first half by grabbing the top panel and pulling it toward the perimeter of the tank.
5. There is an "X" marked on the liner that should sit atop the center mound of the tank.
6. Once the first half is unfolded, return to the center of the tarp and unfold the remaining half by grabbing the top panel and pulling it toward the perimeter of the tank, covering the remainder of the tank.
7. Fold the outer edges of the Liner/Pad back within the perimeter to allow assembling the wall.
8. Once the wall is assembled, lift the edge of the tarp over the wall and clamp in place.
