

OSPREY

One of our first designs and still the best selling pistol silencer ever, the Osprey™ is the lightest, quietest, and only multi-caliber polygonal centerfire pistol silencer on the market. The revolutionary eccentric, monocoire baffle design increases internal volume below the bore line, therefore increasing sound suppression without

blocking standard pistol sights. The Osprey uses a patented cam locking system, which indexes the silencer to the correct position, even after being removed and reattached to the host. In addition, the Osprey can be used with 300 Blackout subsonic rifle ammunition.

OCTANE

The Octane™ is a user maintainable, multi-caliber centerfire pistol silencer featuring a modular mounting system for use across a wide range of hosts. Innovative, high-strength, stainless steel CTATM (Click Together Assembly) baffles are easily disassembled for cleaning and make the Octane the most durable pistol suppressor line on

the market. This durability is a vital feature of the Octane and means that it can be used on everything from semi auto pistols to carbines to submachine guns – even hosts like the iconic H&K® MP5. In addition, the Octane can be used with 300 Blackout subsonic rifle ammunition.
