

Hello Nature

Combo competitions 2014

Introduction

How shall humans in the future experience nature? What will happen to the swedish nature and regions like Omne that slowly degenerates due too the ongoing urbanization?

This project has a overlying concept which shows a solution how to take care of the current situation, the regional strengths, the different seasons and astonishing nature. The project shows a new way to tourist in the swedish nature and offers urban people to see and experience this fantastic world heritage. Hopefully they will recover and enjoy their stay here. This will create working-situations and people who is aware of the nature tend to take better care of it.

The project shows an idea of a concept with one community-building, a base camp and three types of pods. The pods are made in light weight structures, custom made with only the most necessary equipment for this environment in which you can experience the nature without any big impact and in the terms of nature. This is both education and recreation.

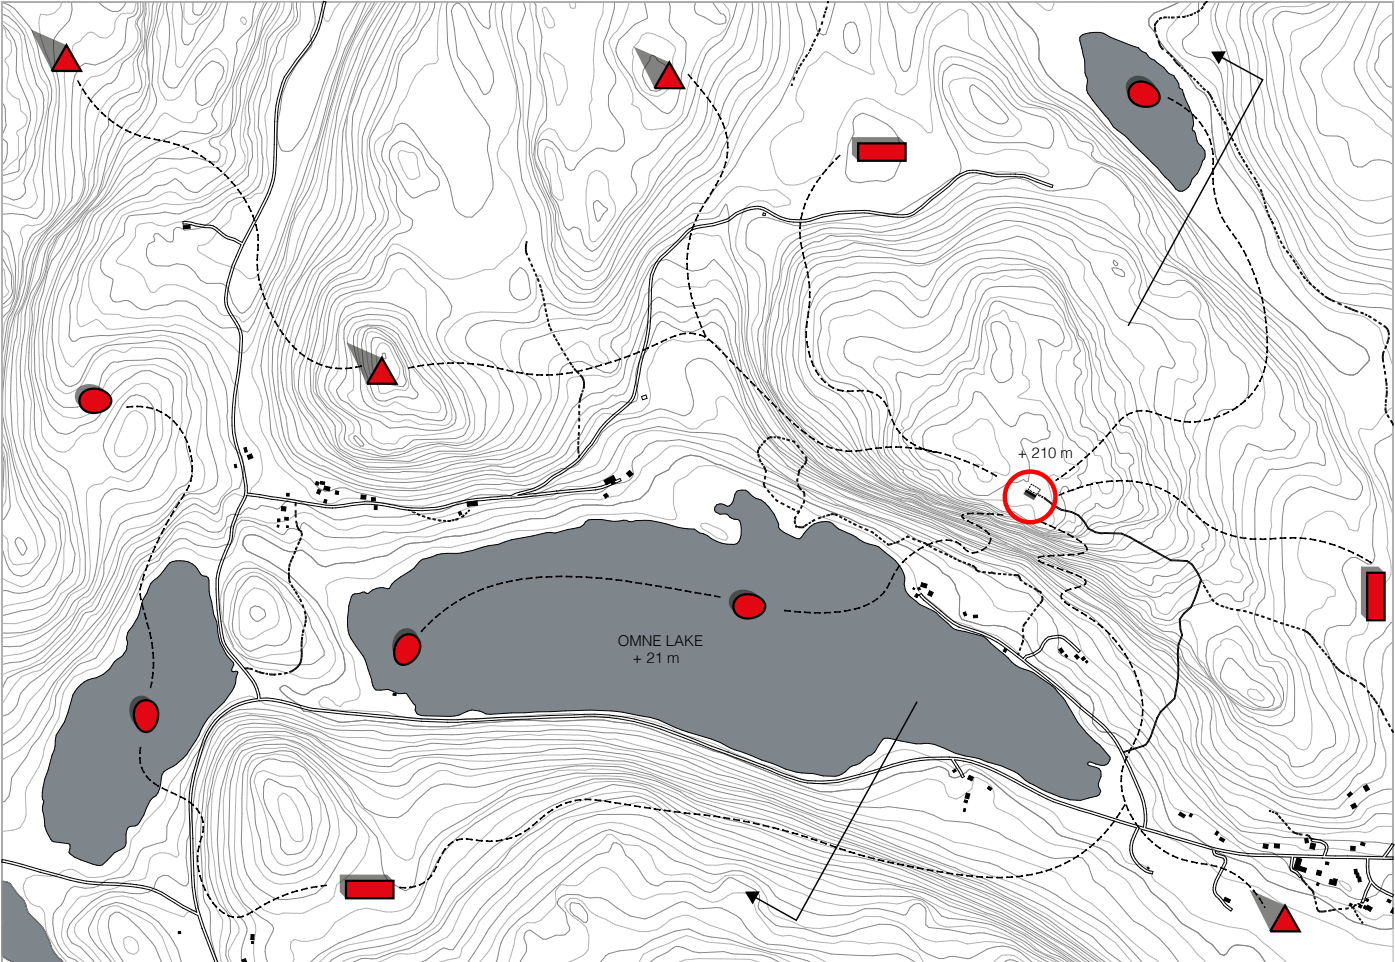

Site

Omne
Population 59 (2010)
Area
26 hectare
Landscape
Ångermanland
Municipality
Kramfors
County
Västernorrlands län
Coordinate
62°57'0"N 18°22'0"E

Basic conditions

Demand protection against	rain	wind	cold	threat
Needs	fire/heat	bed	dinett	storage
Desier	water	toilet	electricity	shower
Activity	art	music	literature	? optional

Site activitys

Key Map Equipment Food Drinks Sauna Manufacturing Mounting Storage

This is the place where you can come and pick up your, on forehand booked, key, food, equipment and gas etc.

You can also come and take a bath, shower, eat etc. meanwhile you're touring in the nature.

This concept creates work all around the year since the project contains pods for all seasons and they need to be stored, manufactured, mounted, repaired and transported for the visitors.
