ATRO Adds To Product Line

Additions to ATROBUSHING product line meeting the need of customers

June 18, 2018 - ST. CLAIR, MO —ATRO Engineered Systems, in striving to recognize and meet the ever changing needs of their customers, has added to their aftermarket product line – adding components for both the Meritor RFS23T/RFS25T/RFS30T and Watson & Chalin SL1100LW suspensions, plus additions to their hood latch line.

“We understand that our customers have choices. We want to make sure they choose us by continuing to provide them with the highest quality, best performing product in the marketplace,” Rob Donaldson, Director of Engineering/New Product Development at ATRO.

Meritor RFS23T/RFS25T/RFS30T

The Meritor RFS Series suspension is used in specialized vocational markets, such as flatbeds, tankers, auto haulers and lowboy trailers. ATRO now carries two bushing choices for the key serviceable part on these suspensions. [Click here to open Product Announcement](#)

Watson & Chalin SL1100LW

This self-steering, lightweight lift axle suspension system is ideal for dump, mixer and refuse applications. ATRO’s pivot bushing additions are a great compliment to their growing Watson & Chalin product line. The bushing are made of long lasting polyurethane which is chemically resistant to the elements and a competitive alternative to rubber. [Click here to open Product Announcement](#)

Hood Latches

These Kenworth and Peterbilt hood latches are very popular in the market and a natural extension of our current line. The physical properties of polyurethane are well suited for this application, as exposure to chemicals and the elements does not affect polyurethane. Repeated use can cause rubber latches to break. Conversely, ATRO’s polyurethane has 3 times the tear strength of rubber. [Click here to open Product Announcement](#)
