

# Kaplogic Aegis PSIM Integration with C•CURE 9000

## Features That Make a Difference:

- Provides real-time situational awareness from existing physical security systems and devices
- Allows security personnel to receive and respond to real-time events
- Door control, intrusion zone monitoring, control arm/disarm with dynamic state updates

## Aegis Integration with C•CURE 9000

In an emergency, seconds count! Communication to the correct officials is vital to the mitigation of any sized event. Aegis physical security information management (PSIM) software addresses the need for the integration of facilities, equipment, personnel, procedures, and communications within a common interface. This combined with Operator efficiency and a cost savings in the reduction of training the Operators to current standard operating procedures makes the Aegis PSIM a vital link. The Aegis PSIM provides an all-hazards incident management interface which can be used for any type, scope or complexity of event.

The Aegis PSIM and the C•CURE 9000 integration module allows a flow of alarms and events between Aegis and C•CURE 9000 to deliver a seamless integrated security solution. You can correlate video with a C•CURE 9000 event and alarm information in one powerful interface. Any event or alarm can trigger a wide range of actions within Aegis including starting recordings on a third party NVR/DVT, displaying live video from cameras on monitors and Aegis viewing panes, moving PTZ cameras to specific locations, or sending notification emails. Physical access control areas, such as doors, and elevators can be monitored and controlled by security personnel all combined by real-time dynamic state updating.

Supported OS	Win 10	Server 2012
Supported Hardware	Multi-Core Processor	16GB Ram

***Video cards based on user's requirement for video streaming. On-board video cards are not supported.***
