

victor Unified Client v5.4.1 Integration with Commend Intercom v4.1.108.0 Release Notes

October 2019

This document provides important information regarding the victor v5.4.1 Commend Integration for both server and client machines. In case of any discrepancy, the information below supersedes the information in any document referenced herein. Read this file before installing the product.

Overview

Commend Intercom systems can interconnect with victor Unified Client's access control system through a digital connection over the Internet. The use of the IP network with the integration not only allows voice communication between Commend stations, but also takes on increasingly complex control and reporting tasks in victor.
