

victor v4.8SP1 Commend Intercom Integration Release Notes

February 2016

Overview

Commend Intercom systems can interconnect with victor Unified Client's access control system via a digital connection over the Internet. This integration's use of the IP network not only transmits speech, but also takes on increasingly complex control and reporting tasks in victor.

This document provides important information regarding the victor v4.8SP1 Commend Integration for both server and client machines. In case of any discrepancy, the information below supersedes the information in any document referenced herein.
