

Speech Racer is a revolutionary app created to help children and youth who struggle to pronounce the "R" sound consistently. Speech Racer is the first and only speech recognition and articulation grading app in speech therapy!

HOW IT WORKS

FLASH CARDS

There are over 300 flashcards, each with images and words. They can be turned on or off. Flashcards are able to be randomized and will change difficulty depending on the score.

METER

In-app meter allows you to rate and score words. The different meters have various levels of measured increments.

REVIEW

Go back and review difficult flashcards that were scored in one of the three categories: red, yellow, or green. Reviewing words can change the word's score and improve the session's final score.

R WORD LISTS

There are 36 lists of "R" words, including: Initial R, Vocalic R, and Initial, Medial, and Final positions blends.

VOICE DETECTION

Voice recognition detects audio samples that are recorded while the "Hold & Speak" button is pressed.

SCORING

Improve your score until you get green through a percentage based scoring system. Determine what percentage of green, yellow, and red you get while practicing your "R" sound.
